

SPECIAL OPERATING CONDITIONS

In the Construction Permit (BMPED-20050815AEB), originally granted January 20, 2006 to Catholic Broadcasting Northwest, Inc., and later reissued on January 26, 2006, the following Special Conditions were set forth in the permit.

1. **Reduction of Power as Necessary.** Station KBVM will adhere to this condition as necessary to protect persons having access to the site tower antenna from RF electromagnetic fields in excess of FCC guidelines.
2. **Vertical Plane Radiation Pattern.** Attached hereto is a copy of the vertical plane pattern provided by Shively Labs for the antenna installed by Station KBVM.
3. **Section 73.317(b) Measurements.** This condition required measurements sufficient to demonstrate compliance with the spurious emission requirements of the Commission's rules. Attached hereto is the report demonstrating the measurements taken in the occupied band width by Station KBVM on February 7, 2006. These measurements represent those taken on Stations KMHD, KBBS and KBVM while all stations were operating with their authorized facilities.
