NOTE: In addition to the information called for in this section, an explanatory exhibit providing full particulars must be submitted for each question for which a "No" response is provided.

CERTIFICATION

AUXILIARY ANTENNA APPLICANTS ARE NOT REQUIRED TO RESPOND TO ITEMS 13-16. PROCEED TO ITEM 17.

13. Allotment. The proposed facility complies with the allotment requirements of 47 C.F.R. Section 73.203.	<input checked="" type="radio"/> Yes <input type="radio"/> No
---	---

		See Explanation in [Exhibit 21]
14.	Community Coverage. The proposed facility complies with 47 C.F.R. Section 73.315.	<input checked="" type="radio"/> Yes <input type="radio"/> No See Explanation in [Exhibit 22]
15.	Main Studio Location. The proposed main studio location complies with 47 C.F.R. Section 73.1125.	<input checked="" type="radio"/> Yes <input type="radio"/> No See Explanation in [Exhibit 23]
16.	Interference. The proposed facility complies with all of the following applicable rule sections: Check all those that apply: Separation Requirements. <input checked="" type="checkbox"/> a) 47 C.F.R. Section 73.207 Grandfathered Short-Spaced. <input type="checkbox"/> b) 47 C.F.R. Section 73.213(a) with respect to station(s): [Exhibit 25] Exhibit required <input type="checkbox"/> c) 47 C.F.R. Section 73.213(b) with respect to station(s): [Exhibit 26] Exhibit required <input type="checkbox"/> d) 47 C.F.R. Section 73.213(c) with respect to station(s): [Exhibit 27] Exhibit required. Contour Protection <input type="checkbox"/> e) 47 C.F.R. Section 73.215 with respect to station(s): [Exhibit 28] Exhibit required.	<input checked="" type="radio"/> Yes <input type="radio"/> No See Explanation in [Exhibit 24]
17.	Environmental Protection Act. The proposed facility is excluded from environmental processing under 47 C.F.R. Section 1.1306 (i.e., The facility will not have a significant environmental impact and complies with the maximum permissible radiofrequency electromagnetic exposure limits for controlled and uncontrolled environments). Unless the applicant can determine compliance through the use of the RF worksheets in Appendix A, an Exhibit is required. By checking "Yes" above, the applicant also certifies that it, in coordination with other users of the site, will reduce power or cease operation as necessary to protect persons having access to the site, tower or antenna from radiofrequency electromagnetic exposure in excess of FCC guidelines.	<input type="radio"/> Yes <input checked="" type="radio"/> No See Explanation in [Exhibit 29]
PREPARERS CERTIFICATION ON PAGE 3 MUST BE COMPLETED AND SIGNED.		

SECTION III - PREPARER'S CERTIFICATION

I certify that I have prepared Section III (Engineering Data) on behalf of the applicant, and that after such preparation, I have examined and found it to be accurate and true to the best of my knowledge and belief.

ENVIRONMENTAL CONSIDERATIONS
prepared for
Liberman Broadcasting of Houston License Corp
KTJM(FM) Port Arthur, Texas
Facility ID 20489
Ch. 253C 100 kW 596 m

Nature of The Proposal

Liberman Broadcasting of Houston License Corp. (“*Liberman*”) is the licensee of KTJM(FM), Ch. 253C, Port Arthur, Texas. *Liberman* seeks to relocate KTJM to a proposed new tower structure at a different site location.

Liberman will commission a review of the various environmental subjects outlined in Section 1.1307(a)(1-8). The instant application will be amended when that review is complete to provide any additional material that may be necessary. Pending submission of that amendment, a response of “no” has been supplied in response to Item 17 of the associated FCC Form 301 Section III-B.

Human Exposure to Radiofrequency Electromagnetic Field

The proposed operation was evaluated for human exposure to radiofrequency (“RF”) electromagnetic field using the procedures outlined in the Commission’s OET Bulletin No. 65 (“OET 65”). OET 65 describes a means of determining whether a proposed facility exceeds the radiofrequency exposure guidelines adopted in §1.1310. Under present Commission policy, a facility may be presumed to comply with the limits specified in §1.1310 if it satisfies the exposure criteria set forth in OET 65. Based upon that methodology, and as demonstrated in the following, the proposed transmitting system will comply with the cited adopted guidelines.

Liberman proposes to install the KTJM transmitting antenna such that its center of radiation is 594.6 meters above ground level. An effective radiated power of 100 kilowatts, horizontally and vertically polarized, will be employed. A worst-case value of 100 percent relative field is used for

Exhibit 29 - Statement B
ENVIRONMENTAL CONSIDERATIONS
(page 2 of 3)

this calculation. The “uncontrolled/general population” limit specified in §1.1310 for the FM Broadcast service is 200 $\mu\text{W}/\text{cm}^2$. RF plane wave power density is predicted pursuant to OET Bulletin 65, equation (9):

$$S = (33.4098) (F^2) (ERP) / D^2$$

Where:

S	=	RF power density in microwatts/cm ²
ERP	=	total ERP in Watts
F	=	relative field factor
D	=	distance in meters

Using this formula, the proposed facility would contribute an RF power density of 19.0 $\mu\text{W}/\text{cm}^2$ at two meters above ground level near the antenna support structure, or 9.5 percent of the general population/uncontrolled limit.

According to the FCC’s CDBS database, the nearest authorized FM station is KVST(FM) (CP, Ch. 279C, La Porte, TX), at 3.2 km from the proposed KQQK. There are no authorized television or AM stations within 10 km. At these large distances, consideration of these other broadcast station emitters is not necessary.

In a separate application, *Liberian* will propose to relocate KQQK (Ch.300C, Beaumont, TX) to the site proposed herein for KTJM and employ a “common” antenna system at 90 kW ERP (horizontal and vertically polarized) with KTJM. Calculations show that on a worst-case basis, KQQK would contribute an RF power density of 17.1 $\mu\text{W}/\text{cm}^2$ at two meters above ground level near the antenna support structure, or 8.6 percent of the general population/uncontrolled limit.

Summing the individual contributions from KTJM and KQQK, the total RF power density is 18.1 percent of the general population/uncontrolled limit. When the antenna’s actual vertical (elevation) pattern is employed, the calculated RF power density near the ground is reduced

Exhibit 29 - Statement B
ENVIRONMENTAL CONSIDERATIONS
(page 3 of 3)

significantly. At ground level locations away from the base of the tower, the calculated RF power density is even lower, due to the increasing distance from the transmitting antenna.

Safety of Tower Workers and the General Public

As demonstrated herein, excessive levels of RF energy attributable to the proposal will not be caused at publicly accessible areas at ground level near the antenna supporting structure. Consequently, members of the general public will not be exposed to RF levels in excess of the Commission's guidelines. Nevertheless, tower access will be restricted and controlled through the use of a locked fence. Additionally, appropriate RF exposure warning signs will be posted.

With respect to worker safety, it is believed that based on the preceding analysis, excessive exposure would not occur in areas at ground level. A site exposure policy will be employed protecting maintenance workers from excessive exposure when work must be performed on the tower in areas where high RF levels may be present. Such protective measures may include, but will not be limited to, restriction of access to areas where levels in excess of the guidelines may be expected, power reduction, or the complete shutdown of facilities when work or inspections must be performed in areas where the exposure guidelines will be exceeded. On-site RF exposure measurements may also be undertaken to establish the bounds of safe working areas. The applicant will coordinate exposure procedures with all pertinent stations.
