RE: WNSR SITE RELOCATION

This is to confirm that my field strength measurements on WENO-AM, 760 kHz., coupled with the co-channel Memphis measurements on file and the adoption of the proposed F.C.C. overlap signal ratio revisions will allow WNSR to co-locate at the WENO 760 transmitter site. I have several of the exhibits prepared and currently waiting for the Commissions order on the overlap requirements as per the AM revitalization initiative.

If any additional information is needed, please advise.

Sincerely,

  
Gary M. Brown
