

EXHIBIT 7
CONSTRUCTION VARIATION

Application for Construction Permit incorrectly specified antenna as a Scala SL-8. ERP calculations used the specifications for a Kathrein 771304 and that antenna is installed. Both antennas are non-directional.

There was a calculation error in the original filing that was corrected by letter dated 08/20/98 and specified the ERP on the horizon at 0.740 kW instead of 0.677 kW. There was no place for "maximum ERP in any" angle in the original filings and we calculate that at 0.910 kW for this application.
