Second-Adjacent Waiver Request
Tucson, AZ

The proposed LPFM station will broadcast on channel 256, which is within the 93 kilometers second-adjacent minimum distance separation of station KIIM-FM on channel 256. The KIIM-FM interfering contour at the LPFM tower site is 98.5 dBμ F(50,50). Using the ratio of 100:1 (LPFM to KIIM-FM) on the second-adjacent channel, the population within the proposed LPFM 138.5 dBμ contour is zero. Using the free space equation, the predicted interference area is expected to extend 6 meters from the antenna. The antenna is 30 meters above ground level, thus the interference area will never reach the ground. There are no occupied structures or elevated roadways within the interference within the interference area of the LPFM. Therefore, the application is in compliance with §73.807(e)(1) *Waiver of the second-adjacent channel separations.*
