Re: Oshtemo Township Tower Site

To ever it may concern:

I have visited the tower site at Latitude 42°-15'-19" North and Longitude 85°-40'-58" for the placement of a FM antenna.

The observed placement is that the antenna boom heading is 137° true or South 43° East and mounted off of the Southeast side of a triangular tower at the above site position.

Any questions or concerns regarding this report, please call me.

Sincerely,

Terry J. Woldring, PLS#22446
