October 18, 2008

In evaluating the proposed conversion to digital for W18DH, FID 130220, an outgoing interference study was executed. It was discovered that according to Longly-Rice methods approved by the OET, that stations in both the USA and Canada would receive lethal interference if W18DH was to continue operation on channel 18. After thorough searching, channel 32 was found to cause no lethal levels of interference to stations in either the USA or Canada. Thus, Three Angels Broadcasting Network respectfully requests that the Commission look favorably on this application.
