

EXHIBIT 31 Environmental
WEAT-FM FCC 301 Application
Section III-B(17)
CBS Radio Stations Inc.

An Environmental Assessment is not required, as grant of this application would not be considered a major environmental action.

The proposed transmitting antenna, a Dielectric Communications model TUV28GTH/5FM-R 4P290 DC/04 incorporating .75° beam tilt with 1 wavelength spacing, will be mounted on a tower that has been registered with the Commission. The center of radiation has been increased to 454.7 above ground level from the previously licensed center of radiation 388 meters agl. The ERP remains the same at 100 kW H&V. No change is proposed in the overall height of the tower above sea level.

The proposed transmitting facilities will comply with the FCC guidelines limiting human exposure to radio frequency energy. The maximum power density level at any location at ground level, calculated in accordance with OET Bulletin No. 65 (August 1997), would be less than 5% of the applicable limit for exposures of unlimited duration. Accordingly, the proposed facility is categorically excluded by FCC Rules from having to consider the contributions of other stations at the site. If work is done on the tower in an area where over exposure could occur, the Licensee in coordination with the other users will take necessary action to prevent the overexposure of workers on the tower including reducing the transmitting power or ceasing operation completely.
