

RF Exposure Statement
KRWB Roswell, NM

The facility proposed in this application is for post DTV transition operation and will replace the current analog facility on the same channel (channel 21 – station does not have a pre-transition digital channel). The current analog operates on channel 21 with an ERP of 5,000 kW. The new DTV facility will operate on channel 21 at the same elevation as the current analog antenna and use the analog antenna but with an ERP of 164 kW. At that power level there will be an overall reduction in RF radiation in the vicinity of the tower and is within the accepted limits. All other current safeguards related to the site with regard to both workers and the general public will remain in place.
