

W231CC Construction Certification

The Bky3 antenna was oriented at 360 degrees or due South. The facility antenna has a center of radiation at 13 meters on the support structure. Mounting meets manufacturers instructions for this antenna.

No workers were near the antenna when radiating. Special Conditions require rf safety and the applicant required rf be ceased when workers were near the antenna. This is a low power translator. The support structure is temporary as required by zoning regulations.

I have been a broadcast engineer for over 30 years. I am familiar with broadcast construction and certify the facility was built as licensed.

Martin Henley
October 20, 2010

A handwritten signature in blue ink that reads "Martin Henley". The signature is written in a cursive style with a long, sweeping tail on the "y".
