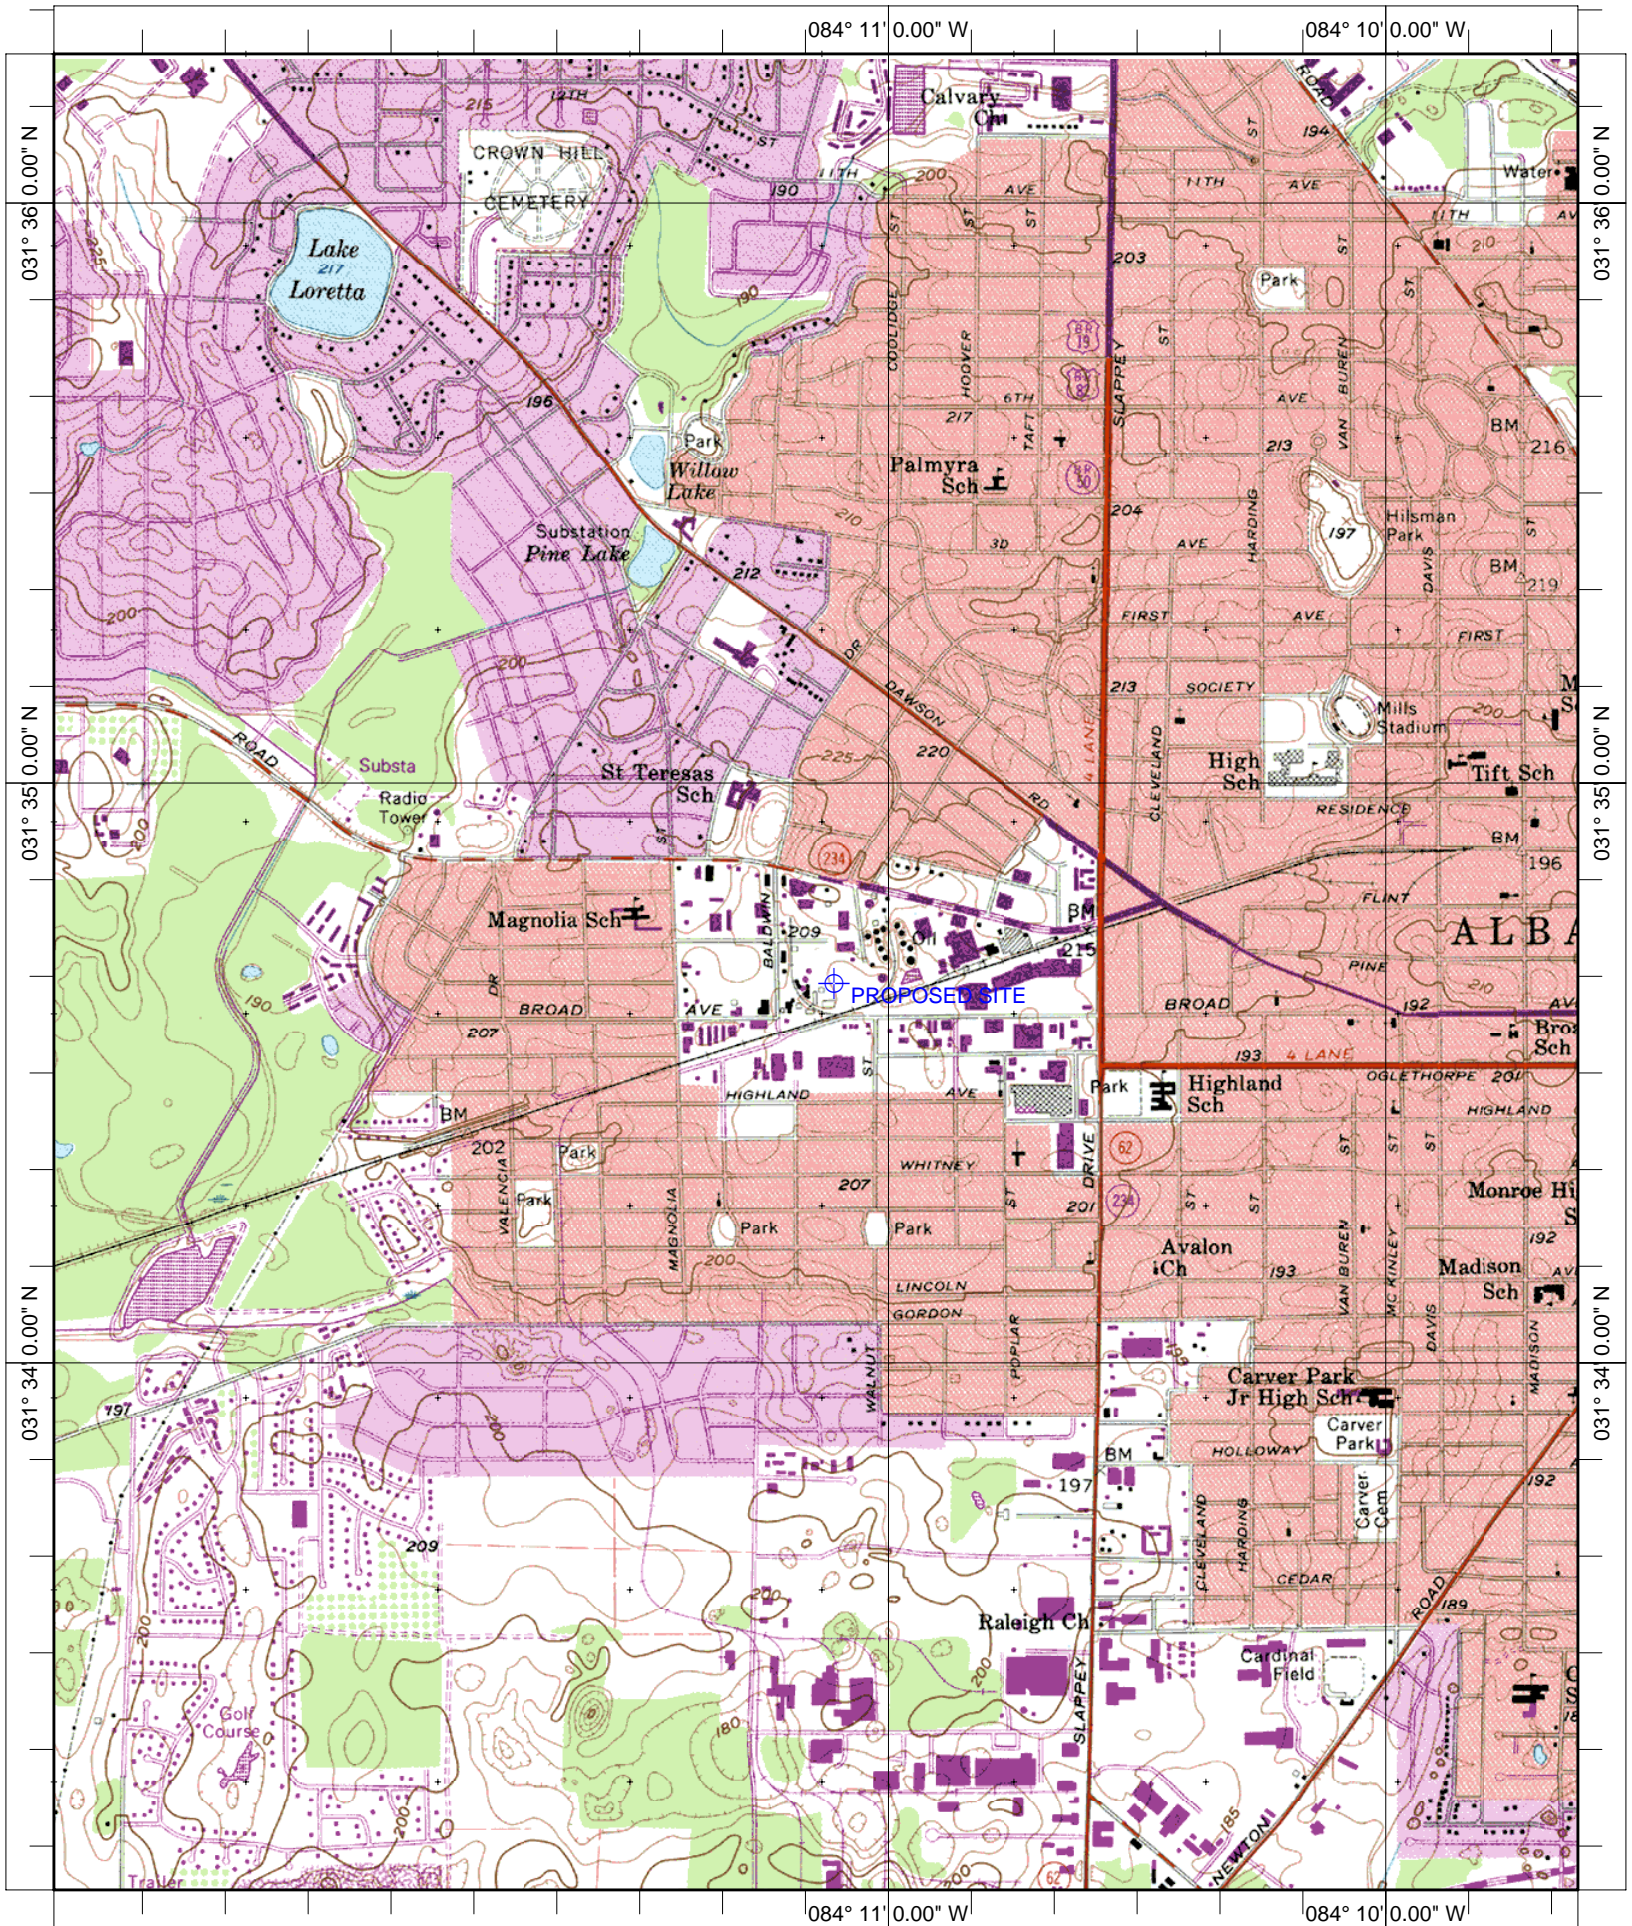

Exhibit 12 (Compliance with CFR 74.1204)

The proposed FM Translator is located within the protected 60 dBu contour of second adjacent channel station WNUQ, channel 269A, Albany, GA. The predicted F(50-50) field strength of WNUQ at the proposed translator site is 85 dBu, see E12A. Therefore, the respective predicted interfering contour generated by the proposed FM Translator is 125 dBu. This interfering contour extends less than 24 meters from the proposed transmit antenna, and the area of overlap does not reach the ground (the antenna will be mounted at the 65 meter level on a 119 meter tower).

To confirm the absence of population within the interference aperture, EMF has examined the attached topographic map, which indicates a lack of structures near the proposed tower, and therefore no structure which could be tall enough to enter the 24-meter interference aperture.

Therefore, EMF respectfully requests a waiver of C.F.R. 74.1204 based on no population within the area of predicted interference.
