AFFIDAVIT
WXAL-FM Radio Tower
Chipman Hall
Middlebury, Vermont

Dear Mr. Hosford;

On July 15, 2001, I examined the subject radio tower with regard to the orientation of the new antennae elements as remounted on the new stand-off mounts.

I attest the antennae is oriented within one degree of 254° True North Azimuth, as specified by Shively Labs. This determination is based on the alignment of the center element with the azimuth mark established by me on May 9, 2001. Said alignment conforms to the construction permit granted by the Federal Communications Commission, 8-30-99.

Very truly yours,

VERNON C. BUTTON, Licensed Surveyor
