

(Exhibit C) Environmental Impact (continued)

The operation has not utilized any unusually fragile environmental area. The existing towers have not required any changes to the contour of the surface land nor have any changes occurred to surface water turbidity. The operation has not caused or precipitated any identifiable long term changes in the diversity of plant species, or in the population density of an individual native species of plants.

In summary, the operation of WMIZ/WVLT has had no special environmental significance. There should be no further effect on scenic, cultural, historic, architectural, archeological, or recreational uses of surrounding lands, beyond that now being experienced. There will be no deforestation, water diversion, wetland fill, or other extensive change of surface features. The operation will not create, directly or indirectly, a permanent environmental change to animals, plants, land, or humans.
