

## EXHIBIT 11

This narrative exhibit is submitted to demonstrate that this proposal fully complies with the interference criteria set forth in Section 74.1204 of the Commission's rules. Attached at exhibit 12 are a spacing study and maps demonstrating clearly that there is no prohibited overlap between this proposal and any other FM services. The attached FM spacing study demonstrates that this proposal would be fully spaced even as a full power Class A FM station to all but three other FM facilities. No minimum spacing is required to the proposed new FM Educational facility on 89.1 MHz at Center Moreland, PA as this proposal is excluded as the ERP proposed is less than 100 watts ERP. The attached maps demonstrate that there is no prohibited contour overlap between these three facilities and the instant proposed FM translator facilities. As demonstrated in these maps no prohibited overlap with these stations is predicted.

The three facilities that have been included on the attached maps are: WAAL, 99.1, Binghamton, NY (54 dBu contour to proposed 94 dBu interference contour); WVRZ, 99.7, Mount Carmel, PA (60 dBu contours to proposed 40 dBu interference contour); and WUSR, 99.5, Scranton, PA (60 dBu contour to prop. 54 dBu int. contour). W256BF 99.7 Center Moreland, PA Interference Analysis Blown Up is to more clearly show that this proposal is fully spaced. A scale of kilometers has been included on the maps. These maps were drawn to scale using the rfSoftware series of computer programs.
