In evaluating the application for a new construction permit for Lake Crystal, MN BNPTTL-20000830BJV FID 130209, an outgoing interference study was executed at the new tower location with an ERP of 16 kW using a outlined antenna and rotation. The stations listed in the table below showed possible interference. When these stations were evaluated for outgoing interference using the OET-69 Longley Rice methodology, the interference when rounded to the nearest 100th percent was found to be zero percent.
