KHAY

The proposed site is contained entirely inside the service contour of second-adjacent Station KHAY, Channel 264, Class B, 39kW, Ventura, CA. The level of least arriving protected F(50,50) signal at the proposed transmitter site is 62.3-dBu. Using the Undesired-to-Desired method for calculating proposed interference, the interfering contour with respect to KHAY is 102.3-dBu (free-space contour method employed). The interfering signal would, in the worst case at the maximum radial extend 173 meters, or .173km, from the base of the tower. Attached is a portion of the Lake Cachuma quadrangle showing that this site is not in a highly populated area. This is a highly used communications site where a number of poles and towers are located, including ASR #'s 1201695, 1014010, 1214204 & 1211862. There are several buildings located at this site, all are associated equipment buildings for the various tower users and none are businesses. Because there are no residences or businesses located within the interference contour, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent Station KHAY.
