**EXHIBIT 21 - CANADIAN PROTECTION ANALYSIS**

**APPLICATION FOR NEW NCE FM  
212A - COLEBROOK, NH**

The proposed operation on channel 212A in Colebrook, NH is located 15.1 km from the border between the United States and Canada. A number of Canadian facilities were found that required interference analysis (shown on Figure 1). For each of these facilities the 54 dBu contour was calculated using Class maximum operating parameters at the notified site.

The pertinent interfering contours from the proposed operation were calculated using parameters requested in this application.

All contours were calculated in one degree increments of azimuth.

As shown on the attached Figure 1, the proposed operation will not create interference to any Canadian facility or notification.

The applicant believes that this proposal is in full compliance with the requirements of the FM Working Agreement between the United States and Canada.

NEW(FM) - 212A - COLEBROOK, NH
