ENGINEERING REPORT COVERING
REQUEST FOR MODIFICATION OF CONSTRUCTION PERMIT
ON BEHALF OF ROSE CITY RADIO CORPORATION
FOR STATION KMPC (AM) 1540 KILOHERTZ
LOS ANGELES, CALIFORNIA

NOVEMBER 2004

ENGINEERING REPORT COVERING
REQUEST FOR MODIFICATION OF CONSTRUCTION PERMIT
ON BEHALF OF ROSE CITY RADIO CORPORATION
FOR STATION KMPC(AM) 1540 KILOHERTZ
LOS ANGELES, CALIFORNIA

SUMMARY

The engineering exhibit of which this statement is part was prepared on behalf of Rose City Radio Corporation, hereinafter referred to as "Rose City", in support of a request for modification of construction permit BP-20031216ADK for AM station KMPC Los Angeles, California. Rose City is the licensee of KMPC. KMPC is licensed to operate on 1540 kilohertz with power of 50 kilowatts daytime and 10 kilowatts nighttime employing a dual mode directional antenna system. The construction permit authorizes a modified 50 kilowatt daytime operation and a 2.9 kilowatt nighttime operation with a dual mode directional antenna system from the existing transmitter site. This report proposes a minor modification of the permit. Specifically, changes to the directional antenna electrical parameters and a power increase to 40 kilowatts are sought for the KMPC nighttime antenna system. The only other change proposed is to amend the height above ground for tower number 1 from 60.4 to 66.5 meters. Since the electrical height of this tower, which is also employed for the daytime antenna system, will not change, this amendment has no effect on the proposed daytime operation.

NIGHTTIME ALLOCATION CONSIDERATIONS

The protected RSS nighttime limits of any legally qualifying North American station will not be increased by this proposal. The presently licensed facilities result in KMPC being a 50% RSS contributor to two domestic and one international stations. The domestic stations are first adjacent channel KYCY San Francisco, California and co-channel KREA Honolulu, Hawaii. Section 73.182(q) of the rules, footnote 1, requires that the KMPC nighttime proposal decrease its RSS contribution by 10% toward these stations. The proposed KMPC nighttime directional antenna system design reduces the RSS toward the KYCY licensed facilities by 10.3%, toward a pending KYCY application by 15.4%, and toward KREA by 16.5%. It should be noted that KMPC's presently licensed facilities are the sole contributor to the KREA 50% RSS. The amount of the contribution is 1.995 mv/m. Section 73.182(q) limits protection to 2 mv/m. Therefore, even though the radiation was reduced, a 10% reduction is not required toward KREA.

The international station for which KMPC is presently a 50% RSS contributor is co-channel XEHOS Villa De Seris, Sonoma, Mexico. The US treaty with Mexico prohibits existing radiation to be increased when a station is a 50% RSS contributor. The FCC has not accepted this and has filed an objection with Mexico. In order to expedite the processing of this application, the KMPC proposal does not increase radiation toward XEHOS beyond what is presently authorized. Actually, the radiation proposed is decreased by 3.8%. Therefore, XEHOS is fully protected. The presently licensed facilities also result in KMPC being a 25% contributor to co-channel station KXPA Bellevue, Washington. Section 73.182(q) of the rules, footnote 1, requires that the KMPC

night proposal not increase radiation toward these stations. The proposed KMPC nighttime reduces radiation toward KXPA by 4.0%.

The only other significant nighttime protection requirements are for co-channel Class A station KXEL Waterloo, Iowa and first adjacent channel Class A station KFBK Sacramento, California. Figure 2 is a map that shows the proposed KMPC nighttime operation will continue to provide ample protection to the KXEL protected 0.5 mv/m 50% skywave service area. The entire 0.5 mv/m KFBK groundwave contour area is overlapped by the licensed KMPC nighttime operation. Figure 3 shows the proposed KMPC nighttime operation will significantly reduce the overlap area.

TECHNICAL DATA AND EXHIBITS

Figure 1 is a polar plot of the proposed KMPC nighttime antenna pattern. Table 1 is a tabulation of pertinent nighttime vertical radiation.

A map of the city of license service contours for the existing and proposed KMPC nighttime operation is not provided since the proposed pattern maintains or increases radiation in all directions toward the city of license, Los Angeles, California. The KMPC nighttime interference free contour has been determined to be 7.96 mv/m.
