Re: Antenna Installation  
Peru, MA

File: 12-0428

Dear: Mr. Roach:

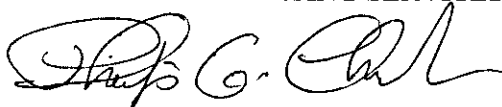

On May 13, 2012, representatives of our firm observed the adjusted the positioning of three Aidena Slant (45 Degree) Yagi Array Antennae on a cell phone tower situated in Peru, Massachusetts. Adjustments to the antenna position were performed by George Small of Horizon Christian Fellowship. Professional Land Surveyor Frederick Haley (PLS MA License No. 37048) performed the field measurements to determine the antenna position.

As prescribed in the report and specifications from Shively Labs, the alignment of the three antenna booms to the azimuths of 170 degrees 0 minutes for two antenna and 287 degrees 30 minutes for the third, with respect to Geodetic (True) North. Reference was made to the Shively Labs drawing AGF 110421-001.

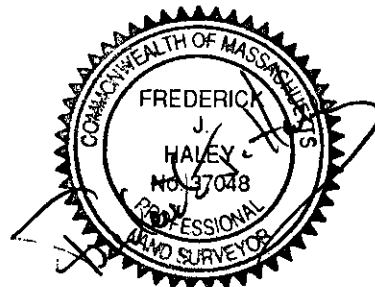

As of the date of the field work, the azimuth orientation of the antenna booms and all antenna were accurate to the prescribed azimuths of 170° and 287.5° within a tolerance of ±20 minutes (0.33 degrees).

Please contact us with any questions or comments.

Very truly yours,
