

## **International Borders**

The proposed antenna location is within 320 kilometers of the common border between the United States and Canada.

As shown in the allocation study printout in exhibit #16 page 1 and in exhibit #21, the proposed change in ERP does not cause any contour overlap with any Canadian FM allocation on station. The proposed F(50-10) 34 dBu interference contour does not overlap the common border between the United States and Canada. This contour lies entirely within the borders of the United States and is thus permitted.

The applicant believes that the proposed modification to the authorized facilities is minimal and meets all of the pertinent requirements of the Working Agreement Between the Governments of Canada and the United States.
