

Exhibit 7
Section III
Item 6
King Broadcasting Company
October 18, 2002

The original DTV Displacement application specified an antenna gain of 16.5, resulting in an ERP of 13.5 kilowatts.

This was based on conversations with Bogner (Radio Frequency Systems) indicating that we could re-use the existing channel 31 Bogner B4US antenna for channel 41.

It was later decided by Bogner that KREM should purchase a new B4US antenna for channel 41.

The gain for this antenna is 11.7, resulting in a lower ERP of 9.6 kilowatts.
