Re: Calvary Chapel of Lompoc
KLWG(FM), Lompoc, California
Facility Identification Number: 90485
Special Temporary Authority

Dear Counsel:

This is in reference to the request filed June 11, 2009, on behalf of Calvary Chapel of Lompoc ("CCL"). CCL requests further extension of the special temporary authority ("STA") granted on December 11, 2008, and modified on January 16, 2009, to operate Station KLVG with temporary facilities.¹ In support of the request, CCL states that it is waiting for the opportunity to file an application for a circularly polarized antenna.

Requests for extension of STA will be granted only where the licensee can show that one or more of the following criteria have been met:

- Restoration of licensed facilities is complete and testing is underway;
- Substantial progress has been made during the most recent STA period toward restoration of licensed operation; or
- No progress has been made during the most recent STA period for reasons clearly beyond the licensee's control, and the licensee has taken all possible steps to expeditiously resolve the problem.

Our review indicates that Application BMPED-20090615AFT has been filed and remains pending; thus, the licensee has been prevented from restoring licensed operation during the most recent STA period for reasons beyond the licensee's control, and the licensee has taken all possible steps to expeditiously resolve the problem.

Accordingly, the request for extension of STA IS HEREBY GRANTED. Station KLVG may continue to operate with the following facilities:

¹ KLVG is licensed for operation on Channel 201A (88.1 MHz) with effective radiated power ("ERP") of 0.02 kilowatt (V only) and antenna height above average terrain ("HAAT") of 344 meters. Construction Permit BPED-20070907AEY authorizes relocation of the transmitter, an upgrade to Class B, and operation with ERP of 0.01 kW-H, 2.5 kW-V, (Max-DA), and HAAT of 571 meters. Application BMPED-20090615AFT proposes modification of the permit to specify operation with ERP of 2.5 kilowatts (H&V), nondirectional.

Geographic coordinates:	34° 38' 38" N, 120° 26' 17" W (NAD 1927)
Channel	201 (88.1 MHz)
Effective radiated power:	Not to exceed 0.1 kilowatt (V only)
Antenna type:	omnidirectional
Antenna height:	
above ground:	16 meters
above mean sea level:	53 meters
Above average terrain:	-129 meters

CCL must use whatever means are necessary to protect workers and the public from exposure to radio frequency radiation in excess of the Commission's exposure guidelines. *See* 47 CFR § 1.1310.

This authority expires on **February 6, 2010**.

Sincerely,

Charles N. Miller, Engineer
