ENGINEERING TECHNICAL STATEMENT PREPARED BY WILLIAM T. GODFREY OF THE FIRM KESSLER AND GEHMAN ASSOCIATES, INC., TELECOMMUNICATIONS CONSULTING ENGINEERS IN CONNECTION WITH AN APPLICATION FOR AUTHORITY TO MAKE CHANGES IN THE CLASS A TELEVISION BROADCAST STATION WINQ-CA CHANNEL 43, PALM BEACH, FLORIDA (FCC FORM 301-CA).

BRIEF SUMMARY OF PROPOSAL

The firm Kessler and Gehman Associates, Inc., has been retained by William Brothers in order to prepare engineering studies and the engineering portion of an application for authority to make changes in a Class A television broadcast station (FCC Form 301-CA). The enclosed application requests authority to make the following minor changes to the WINQ-CA construction permit (BMPTTA20011123AAA): 1) 18.4 meter (60.4 feet) reduction in antenna height; and 2) change antenna and antenna pattern from an Andrew model ALP32L0 directional (cardioid) to a Superior Broadcast Products model UP-10-SPN directional (peanut). All other parameters shall remain unchanged and in accordance with the existing WINQ-CA Channel 43- construction permit.

William Brothers is requesting a waiver of the interference rules to make full use of terrain shielding and Longley-Rice terrain dependent propagation prediction methods to demonstrate that the proposed facility would not be likely to cause interference to TV broadcast stations.

§73.3572(a)(2) defines a major change as any change in; i) frequency (output channel), except a change in offset carrier frequency; or ii) transmitting antenna location where the protected contour resulting from the change is not predicted to overlap any portion of the protected contour based on the station's authorized facilities. §73.3572(a)(3) defines a minor change to be all other changes. Since this application does not propose a change in frequency and does propose to overlap most of the authorized WINQ-CA protected contour (see Exhibit 11), it is considered, and shall be filed as, a minor modification application.

DISCUSSION

William Brothers was recently granted a construction permit (BMPTTA20011123AAA) to operate WINQ-CA on UHF, analog Channel 43 (- offset) with an ERP of 150 kW at an antenna height radiation center of 297.8 meters above average terrain (“AAT”) in the vicinity of Palm Beach, FL. The American Netcom, Inc. (“ANI”), which is commonly owned by William Brothers, has a displacement application on file with the FCC (BMJPTTA20020613AAL) requesting a grant to operate the WTCN-CA facility on Channel 48.

Recently, it was determined that the WTCN facility was receiving excessive interference and accordingly, ANI submitted a displacement application requesting authority to depart from the licensed Channel 15 to Channel 48. A displacement application was also submitted and granted for the WINQ facility to depart from Channel 19 and operate on Channel 43. Since it is proposed for the WINQ-CA (CP) and WTCN-CA (APP) facilities to be co-located on the same American Tower-owned support structure and since new antennas will have to be purchased in order to operate on the new frequencies, William Brothers determined that the best plan of action would be to reduce the antenna height of the WINQ-CA (CP) facility from 297.9 meters above ground level (“AGL”) down to the WTCN antenna height radiation center height AGL of 279.5 meters so that both facilities could diplex from the same broadband antenna. Obviously, the displacement expenses would be significantly reduced if William Brothers went with one broadband antenna and shared transmission line. The cost of two antennas, transmission lines, and tower

strengthening, resulting from additional equipment mounted on the support structure, would be enormous and an unwelcome burden.

Therefore, William Brothers respectfully seeks authority to make minor changes to the WINQ-CA CP by reducing the authorized antenna height by 18.4 meters (60.4 feet) and by changing antennas from an Andrew model ALP32L0 directional (cardioid) to a Superior Broadcast Products model UP-10-SPN directional (peanut). By applying the proposed minor changes, the WINQ-CA Channel 43 antenna height and antenna type will perfectly match the co-located WTCN-CA Channel 48 antenna height and antenna type and therefore, will be able to diplex from the same broadband antenna.

ATTACHED FIGURES

The following list is an index of enclosed figures produced by calculations and engineering studies of the proposed WINQ-CA Channel 43-.

- 1) Exhibit 1 – Engineering Specifications
- 2) Exhibit 2 – Antenna Data
- 3) Exhibit 3 – Elevation View of Support Structure
- 4) Exhibit 4 – Azimuth Pattern
- 5) Exhibit 5 – Azimuth Pattern Tabulation
- 6) Exhibit 6 – Elevation Pattern (2° above to 5° below)
- 7) Exhibit 7 – Elevation Pattern (5° above to 20° below)
- 8) Exhibit 8 – ERP/dBk Pattern
- 9) Exhibit 9 – Site Plotted on Top Map
- 10) Exhibit 10 – FCC Service Contour Plotted for WINQ-CA CH 43-
- 11) Exhibit 11 – Overlap Compliance Exhibit
- 12) Exhibit 12 – Low Power TV Studies
- 13) Exhibit 13 – Longley-Rice Interference Studies (WINQ-CA Channel 43- Interference Studies (Pertains to Exhibits 4 – 6 in FCC Form 301-CA / Exhibits 1 -3 in Form 301-CA are not applicable for engineering).

INTERFERENCE STUDIES

Item number 11, row 1, contained in the Certification section of the enclosed application pertains to Analog TV broadcast station protection in accordance with 47 C.F.R. § 73.6011. This section basically explains how Class A TV stations must protect authorized TV broadcast stations, applications for minor changes in authorized TV broadcast stations and applications for new TV broadcast stations in accordance with the requirements specified in §74.705, titled TV broadcast analog station protection. §74.705(b)(1) explains that an application to change the facilities of an existing station will not be accepted if it specifies a site which is within the protected contour of a co-channel or first adjacent channel TV broadcast station. Our TV interference and spacing study analysis (Exhibit 13) identified the proposed WINQ-CA Channel 43 facility as a station inside the Grade B contour of the WFLX-TV adjacent channel station (Channel 42). Therefore, the proposal does not comply with §74.705(b)(1). Part d of §74.705 also requires a low power TV application to meet the ratio in dB of its field strength to TV broadcast stations at the protected contour. Exhibit 12 is a LPTV study and identifies all stations that the proposed WINQ-CA CH 43 facility would be short-spaced with (contour overlap). As you can see by referring to Exhibit 12, the proposed facility would be short-spaced with WFLX-TV, WXEL-TV and WOTF-TV and therefore, does not comply with §74.705(d). However, §74.705(e) states that an applicant for a low power TV may

request a waiver of the interference rules and make full use of terrain shielding and Longley-Rice terrain dependent propagation prediction methods to demonstrate that the proposed facility would not be likely to cause interference to TV broadcast stations. Therefore, William Brothers is requesting a waiver of the FCC Rules in order to make full use of terrain shielding and Longley-Rice terrain dependent propagation prediction methods. Accordingly, we have checked the “No” radio button in the Certification portion of the application since a waiver is being requested.

Since it was determined that short-spacing did exist, we performed a Longley-Rice study using a Sun Microsystems SPARC 5 computer work station loaded with the FCC’s TV Interference and Spacing Analysis software (See Exhibit 13). Exhibit 13 depicts the detailed Longley-Rice interference studies. As you can see, the proposed WINQ-CA Channel 43- would not cause more than 0.5% interference to any station. The Low Power TV Study indicated that short-spacings existed with WFLX-TV, WXEL-TV and WOTF-TV. Apparently, at some point in time WBSF changed call signs to WOFT and as a result, the Low Power TV Studies reflect the WOFT call sign and the Longley-Rice studies reflect the WBSF call sign. This is not a problem though because the true parameters are used regardless of call sign. As you can see by viewing the Longley-Rice study exhibits, the proposed WINQ-CA facility is predicted to cause no more than 0.4% interference to WBSF (WOFT). The FCC Rules state that Class A station interference cannot decrease population in the NTSC service area by more than 0.5%, therefore, the proposed WINQ-CA Channel 43- facility complies with the Class A protection to NTSC Rules with respect to WBSF (WOFT) and all other applicable surrounding stations.

Item number 11, row 2, contained in the Certification section of the application pertains to Digital TV station and DTV Table of Allotments protection in accordance with 47 C.F.R. Section 73.6013. This section explains how Class A TV stations must protect the DTV service that would be provided by the facilities specified in the DTV Table of Allotments in §73.622 and by applications that propose to expand DTV stations' allotted or authorized coverage contour in any direction. The interference analysis is based on the methods described in §73.623(c)(2) through (c)(4), except that a Class A TV station must not cause a loss of service to 0.5 percent or more of the population predicted to receive service from the DTV allotment, station or application. As you can see by referring to the Longley-Rice interference studies (Exhibit 13), this application complies with the rules established to protect DTV stations from Class A stations. This application proposes parameters that are predicted to not cause more than 0.4% interference to any station.

Item number 11, row 3, contained in the Certification section of the application pertains to Low Power TV, TV translator, Class A, and Digital Class A station protection in accordance with 47 C.F.R. Sections 73.6012 (Protection of Class A TV, low power TV and TV translator stations) and 73.6014 (Protection of digital Class A TV stations). §73.6012 states that application to change the facilities of an existing Class A TV station will not be accepted if it fails to protect other authorized Class A TV, low power TV and TV translator stations and applications for changes in such stations filed prior to the date the Class A application is filed, pursuant to the requirements specified in §74.707 of the FCC Rules. Part d of §74.707 requires a low power TV application to meet the ratio in dB of its field strength to authorized low power TV stations at the protected contour. Exhibit 12 is a LPTV study and identifies all LPTV, translator and booster stations that the proposed WINQ-CA CH 43 would be short-spaced with (contour overlap). As you can see by referring to Exhibit 12, the proposed facility would be short-spaced with W32AB and therefore, does not comply with §74.707(d). However, §74.707(e) states that an applicant for a low power TV may request a waiver of the interference rules and make full use of terrain shielding and Longley-Rice terrain dependent propagation prediction methods to demonstrate that the proposed facility would not be likely to cause interference to low power TV, TV translator and TV booster stations. Therefore, William

Brothers requests for a waiver of the FCC Rules to make full use of terrain shielding and Longley-Rice terrain dependent propagation prediction methods also applies for §74.707. Accordingly, we have checked the “No” radio button in the Certification portion of the application since a waiver is being requested.

The Longley-Rice study (Exhibit 13) verifies that the proposed WINQ-CA Channel 43- facility would not cause more than 0.5% interference to W32AB, therefore, this application complies with the Class A protection to low power TV Rules.

§73.6014 pertains to existing Class A TV station changes and the protection authorized to digital Class A TV stations and applications for changes in such stations filed prior to the date the Class A application is filed. The LPTV (Exhibit 12) and Longley-Rice (Exhibit 13) studies verified that there are no Class A short-spacing or interference issues. Therefore, this application complies with the Class A to Class A TV protection rules.

Item number 11, row 4, contained in the Certification section of the enclosed application pertains to Land mobile station protection in accordance with 47 C.F.R. Section 73.6020. The enclosed modification application does not propose to move the site from the construction permit location. Therefore, the application fully complies with protection to Land Mobile.

The FCC Form 301-CA Certification section requires the following: 1) Exhibit 4 explanation of Analog TV broadcast station protection; 2) Exhibit 5 explanation of Digital TV station and DTV Table of Allotments protection; 3) Exhibit 6 explanation of Low Power TV, TV translator, Class A, and Digital Class A station protection; 4) Exhibit 7 explanation of Land mobile station protection; and 5) Exhibit 8 explanation of Environmental Protection Act. The Longley-Rice studies (Exhibit 13) address the aforementioned exhibits 4 through 6 and 8. The Exhibit 7, Land Mobile Protection requirement has already been established since a CP was just granted based on the proposed location. This engineering technical statement addresses the aforementioned Exhibit 8 (Environmental Protection Act).

TRANSMITTER

It is proposed to top-mount a Superior Broadcast Products model UP-10-SPN, UHF, panel, horizontally polarized, directional (peanut main lobe oriented at N190E°) antenna on the existing support structure owned by American Tower. The tower is registered with the FCC and has a registration number of 1018573. The support structure is located at 3350 Bride Road, Hobe Sound, FL. The proposed antenna height radiation center is 279.5 meters above ground level (“AGL”). The antenna’s highest point will extend to 285.7 meters AGL and the overall height of the structure will extend to 313.6 meters AGL as depicted in Exhibit 3’s elevation view of the support structure.

ENVIRONMENTAL IMPACT

The proposed construction will have no significant environmental impact as defined in §1.1307 of the FCC Rules. The transmitter, transmission line and antenna system will produce an ERP of 150.0 kW. Assuming that the maximum lobe of radiation is oriented at the base of the tower for WINQ-CA, it will produce a power density six feet above the ground of 0.02823mW/cm². This is only 1.31% of the maximum permissible exposure (MPE) authorized by the American National Standards Institute (ANSI). Since the proposed operation of WINQ-CA Channel 43- would not exceed 5.0% of the MPE limit for population/uncontrolled at any point on the ground, WINQ-CA would not be considered a “significant

contributor" to the RF exposure environment pursuant to OET Bulletin 65, Edition 97-01. Therefore, contributions of exposure from other sources were not accounted for in this analysis. It is safe to conclude that the emissions will be insignificant and well within the maximum allowable requirements. If other antennas are placed on the tower in the future, the applicant will cooperate with those users by reducing or completely terminating the power to the antenna when maintenance workers are in danger from the electromagnetic radiation emanating from the antenna. The tower will be enclosed within a fence with warning signs posted at the locked gate.

CERTIFICATION

The applicant accepts full responsibility for the elimination of any objectionable interference including that caused by intermodulation to facilities in existence or authorized prior to the grant of this application.

This technical statement was prepared by William T. Godfrey, Telecommunications Consultant with Kessler and Gehman Associates, Inc. having offices in Gainesville, Florida and has been working in the field of radio and television broadcast consulting since 1998. He graduated from the University of North Florida with a Bachelor of Arts degree in Criminal Justice and a minor in Mathematics and received a Commission in the Aviation Branch of the United States Army in 1993. As a Professional in the field of Telecommunications and as a Captain in the United States Army, he states under penalty of perjury that the information contained in this report is true and correct to the best of his knowledge and belief.

Contour Overlap Evaluation from Class A Complete

Proposed facility OK to FCC Monitoring Stations

Proposed facility OK toward West Virginia quite zone

Proposed facility OK toward Table Mountain

Proposed facility is beyond the Canadian coordination distance

Proposed facility is beyond the Mexican coordination distance

Proposed station is OK toward AM broadcast stations
