COMPREHENSIVE TECHNICAL EXHIBIT

Application for Construction Permit
KSMV-LP, Facility ID 14002
FCC File Number BLDTL-20100218AAD
KJLA, LLC

Minor Change in Licensed Facility. The within proposal seeks a change in the above-captioned facility as follows:

Antenna modified to ALI ATC-C3 Panel Array; tabulation of Directional Antenna Field Values revised to that shown. Transmitter location remains unchanged; antenna pattern of the within proposal fully encompasses that of the underlying license. The same community is served.

Interference Analysis. The proposal has been subjected to the Longley-Rice interference study used by the Commission as run on the *Sun Blade* computer and found to be in compliance with §74.793 with all facilities except those for which interference acceptance agreements are attached as a portion of the exhibit material.

Coordination with Mexico: The use of channel 23 as a digital channel in Los Angeles has been previously coordinated with Mexico by the channel's former occupant, KTBN, at a much greater power than the within application. It is contained in the Post-Transition Digital Table of Allotments and, accordingly, the Commission has recognized that further Mexican coordination is not required.
