Technical Exhibit

The technical exhibit supports a minor change application for construction permit for a TV Translator station K35OP on Channel 35 at Park City, Utah to convert to digital modulation.

Summary of Proposed Facilities

Below is a tabulation of the proposed paired digital facility:

Channel:	35
Geographic Coordinates:	40° 40' 59" North Latitude 111° 31' 22" West Longitude
Antenna Structure Registration:	N/A
Overall Tower Height:	15 meters
Ground Elevation:	2261 meters
Radiation Center:	2273 meters AMSL 12 meters (40 feet) AGL
Antenna Type:	Scala, 4KBBU 5 dB
Antenna Major Lobe Orientation:	Non-Directional
Transmitter Power Output:	0.03 kilowatt (30 watts)
Transmission Line:	LDF5-50A (7/8" Foam - 60 feet)
Emissions Mask:	Stringent
Effective Radiated Power:	0.08 kilowatt

Domestic Allocation Considerations

A study has been conducted to assure that the proposal will not create prohibited interference with other licensed, authorized or pending analog or digital TV, LPTV/translator and Class A TV stations. Using the procedures outlined in the FCC's OET-69 Bulletin, no prohibitive interference is predicted to be caused to any other station as shown by the results provided in Figure 2.

Radiofrequency Electromagnetic Field Exposure

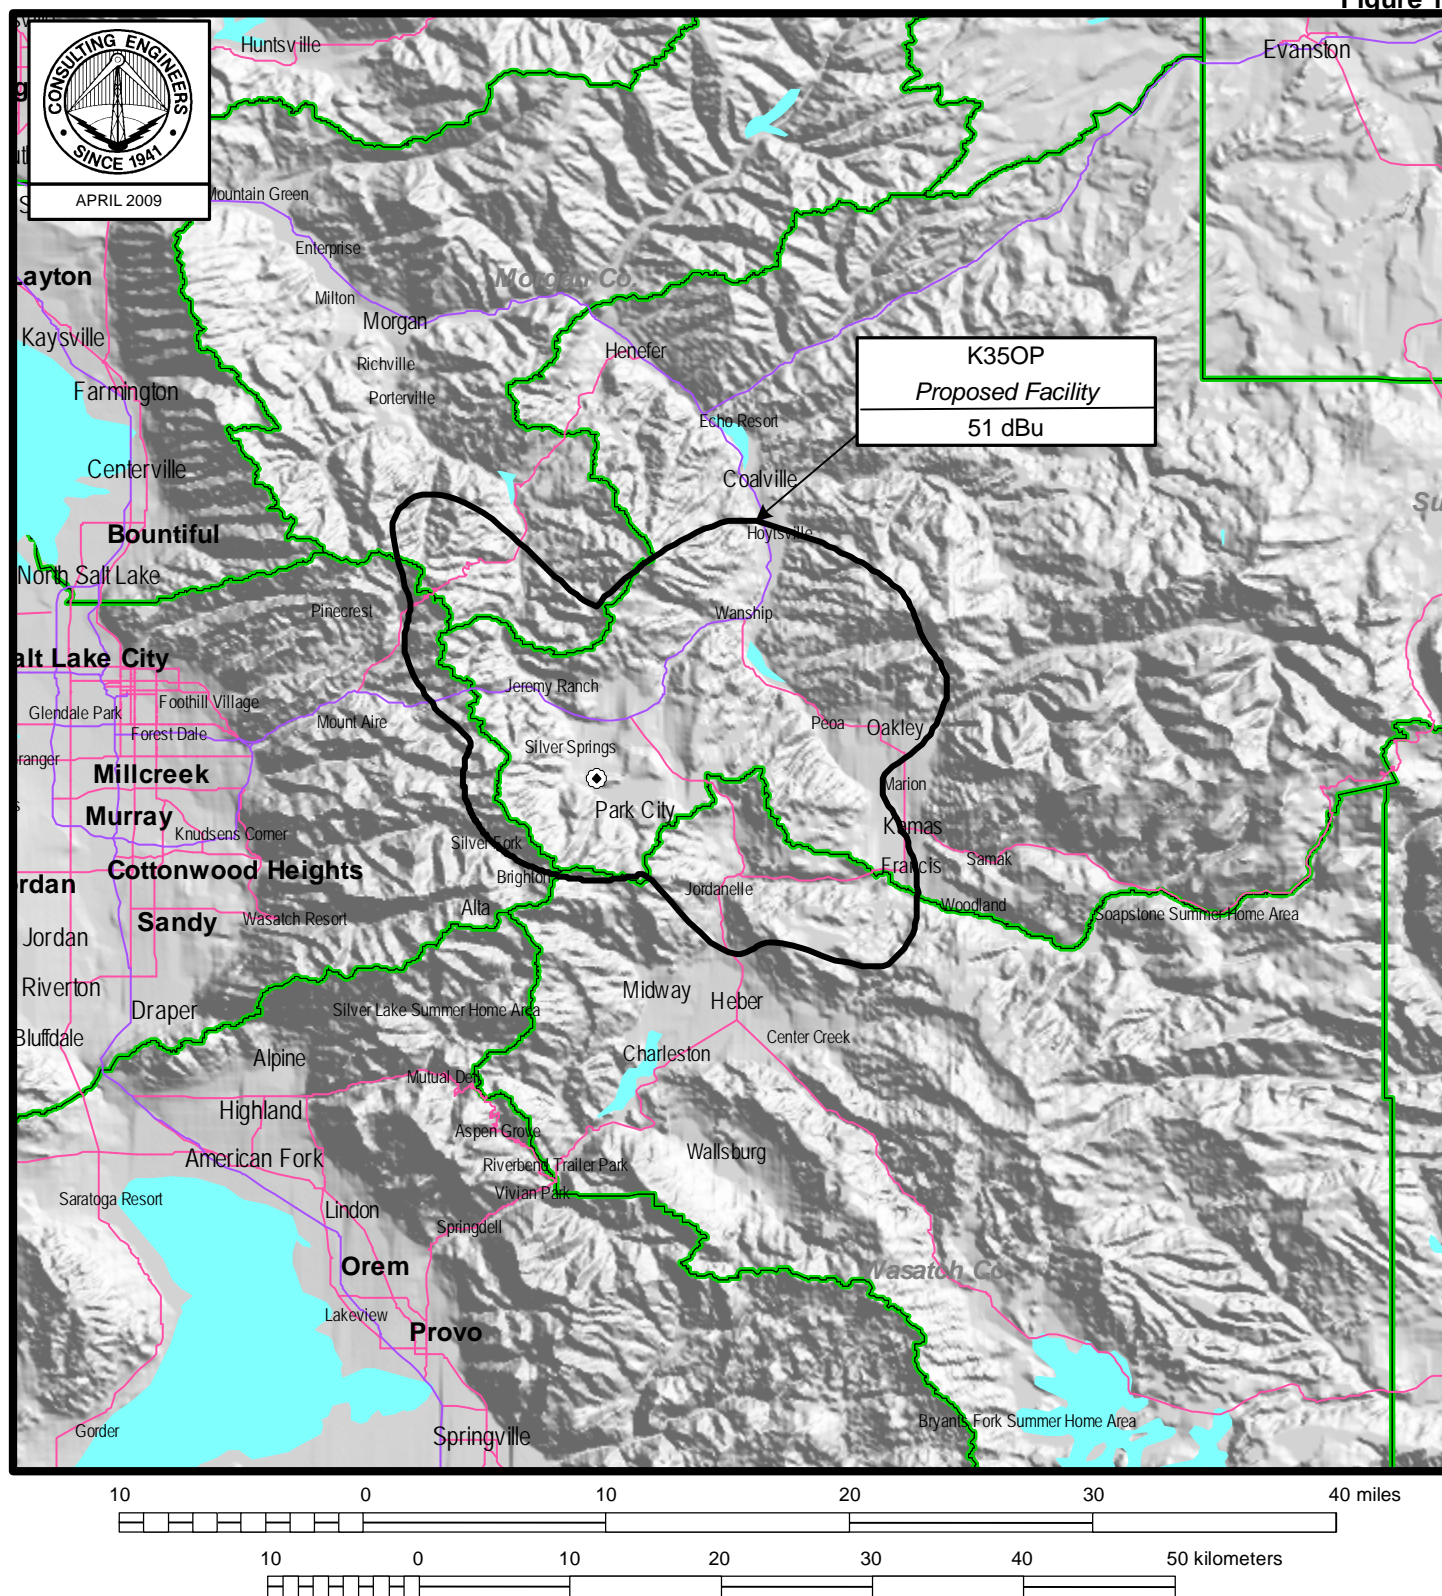

The proposed facilities were evaluated in terms of potential radio frequency (RF) energy exposure at ground level to workers and the general public. The radiation center for the antenna is located 12 meters above ground level. The proposed ERP of 0.08 kW is assumed. A conservative relative field value of 0.5 was assumed for the Scala antenna's downward radiation. The calculated power density at ground level is 0.005 mW/cm². This is less than 5% of the FCC's recommended limit of 0.4 mW/cm² for channel 35 for an "uncontrolled" environment.

Access to the transmitting site will be restricted and appropriately marked with warning signs. In the event that workers or other authorized personnel enter restricted areas or climb the tower, appropriate measures will be taken to assure worker safety with respect to radio frequency radiation exposure. Such measures include reducing the average exposure by spreading out the work over a longer period of time, wearing "accepted" RFR protective clothing and/or RFR exposure monitors or scheduling work when the stations are at reduced power or shut down.

It is noted that this statement only addresses the potential for radiofrequency electromagnetic field exposure. All other aspects of the environmental processing analysis will be or already have been provided to the FCC by the tower owner.
