**ENGINEERING TECHNICAL STATEMENT PREPARED BY WILLIAM T. GODFREY, JR
WITH THE FIRM KESSLER AND GEHMAN ASSOCIATES, INC., TELECOMMUNICATIONS
CONSULTING ENGINEERS IN CONNECTION WITH A MINOR MODIFICATION OF
CONSTRUCTION PERMIT APPLICATION TO MAKE CHANGES TO THE ALABAMA
EDUCATIONAL TELEVISION COMMISSION (AETC) DIGITAL BROADCAST FACILITY,
WAIQ-DT CHANNEL 27 (BMPEDT-20021122AAW), MONTGOMERY, ALABAMA.**

The firm Kessler and Gehman Associates, Inc. has been retained by the Alabama Educational Television Commission (AETC), Birmingham, Alabama in order to prepare engineering studies and the engineering portion of a minor modification of construction permit application for the WAIQ-DT Channel 27 digital television broadcast facility for the purpose of requesting authorization to make changes to the following: 1) antenna system; 2) effective radiated power (ERP); and 3) antenna height radiation center.

Discussion

The WAIQ-DT Channel 27 facility currently operates under an STA with an ERP of 567.54 kW and an antenna height radiation center of 160 meters above ground level (AGL) using a nondirectional antenna. AETC is authorized to operate the WAIQ-DT facility on digital Channel 27 with an ERP of 750 kW and an antenna height radiation center of 160 meters AGL using a nondirectional, top-mounted TCI model 888-8-32 antenna.

The digital channel allotted for WAIQ-DT, Channel 27, is one channel above the licensed NTSC facility, Channel 26. AETC awarded an antenna contract to procure a Dielectric model TFU-36GTH-R O4 DC dual-channel (N26/D27), nondirectional antenna for the WAIQ analog and digital facilities in order to combine the signals using a common dual-channel antenna.

AETC proposes to modify the existing WAIQ-DT Channel 27 construction permit (BMPEDT-20021122AAW) by replacing the authorized TCI model 888-8-32 top-mount, nondirectional

antenna with a new Dielectric model TFU-36GTH-R O4 DC dual-channel (N26/D27), nondirectional antenna. The proposed Dielectric model TFU-36GTH-R O4 DC dual-channel (N26/D27), nondirectional antenna is longer in length than the authorized top-mounted nondirectional antenna; therefore, it is proposed to increase the antenna height radiation center by 2.8 meters. The change in antenna systems will result in an omni-for-omni swap; and it is proposed to decrease the ERP from the authorized 750 kW to 600 kW. AETC purchased a 25 kW digital transmitter for the WAIQ-DT facility and proposes to operate the transmitter slightly below the maximum rated transmitter power output (TPO) for maintenance purposes. The proposed 22.6 kW TPO will result in a maximum ERP of 600 kW which is 150 kW less than the authorized ERP. The reduced ERP will compensate for the slight increase in antenna height so that the proposed F(50,90) 41.0 dBuV/m protected noise limited contour will not exceed the authorized F(50,90) 41.0 dBuV/m protected noise limited contour in any azimuthal direction (Exhibits 10-14).

Accordingly, this minor modification of construction permit application requests authorization to make the following changes: 1) change antennas from the authorized TCI model 888-8-32 top-mount, nondirectional antenna to the proposed Dielectric model TFU-36GTH-R O4 DC dual-channel (N26/D27), nondirectional antenna; 2) decrease the ERP from the authorized 750 kW to the proposed 600 kW; and 3) increase the antenna height radiation center from the authorized height of 160.0 meters AGL to the proposed height of 162.8 meters AGL.

Exhibit 10 is a contour map depicting the authorized F(50,90) 41.0 dBuV/m protected noise limited contour (blue) and the proposed F(50,90) 41.0 dBuV/m protected noise limited contour (red). Referring to Exhibit 10 it can be seen that the proposed F(50,90) 41.0 dBuV/m noise limited contour would be completely encompassed by the authorized F(50,90) 41.0 dBuV/m noise limited contour in all azimuthal directions. Since the authorized F(50,90) 41.0 dBuV/m noise limited contour fully encompasses the proposed F(50,90) 41.0 dBuV/m noise limited contour, it is not required to perform interference studies considering that the proposed facility's potential for causing interference is reduced in all directions and will only improve the overall

Kessler and Gehman Associates, Inc.

Telecommunications Consulting Engineers

picture with respect to incoming interference to other stations. For the same reason, a freeze waiver is not required since this proposal would not violate the filing freeze that is currently in effect.

Exhibit 11 is a distance to contour tabulation sheet depicting the distance in kilometers from the WAIQ-DT transmitter site to the edge of the authorized F(50,90) 41.0 dBuV/m contour in one-degree increments.

Exhibit 12 is a distance to contour tabulation sheet depicting the distance in kilometers from the WAIQ-DT transmitter site to the edge of the proposed F(50,90) 41.0 dBuV/m contour in one-degree increments.

Exhibit 13 depicts the data extracted from Exhibits 11 and 12 and compares the distances. The second column from the left in Exhibit 13 depicts the distances to the authorized F(50,90) 41.0 dBuV/m contour and the third column from the left depicts the distances to the proposed F(50,90) 41.0 dBuV/m contour. The second column from the right is a “PASS/FAIL” column where “PASS” is depicted if the distance to the authorized F(50,90) 41.0 dBuV/m contour for each particular radial is greater than or equal to the distance to the proposed F(50,90) 41.0 dBuV/m contour. The word “FAIL” is depicted if the distance to the proposed F(50,90) 41.0 dBuV/m contour exceeds the distance to the authorized F(50,90) 41.0 dBuV/m contour. Finally, the last column to the right displays the difference in kilometers between the two facilities. Exhibit 13 demonstrates that the proposed F(50,90) 41.0 dBuV/m contour would be completely encompassed by the authorized F(50,90) 41.0 dBuV/m contour in all azimuthal directions.

Exhibit 14 is a chart, created from the tabulation depicted in Exhibit 13, demonstrating pictorially that the distance from the transmitter site to the proposed F(50,90) 41.0 dBuV/m contour (red) is less than the distance from the transmitter site to the authorized F(50,90) 41.0 dBuV/m contour (blue) along all radials.

Kessler and Gehman Associates, Inc.

Telecommunications Consulting Engineers

Exhibit 15 is a principal community contour map demonstrating that the proposed F(50,90) 41.0 dBuV/m Principal Community contour would completely encompass the entire community of Montgomery, AL.

Interference Studies

The authorized F(50,90) 41.0 dBuV/m noise limited contour fully encompasses the proposed F(50,90) 41.0 dBuV/m noise limited contour; therefore, it is not required to perform interference studies. The proposed facility's potential for causing interference is reduced in all directions and will only improve the overall picture with respect to incoming interference to other stations. A freeze waiver is not required since this proposal would not violate the filing freeze that is currently in effect.

Transmitter Site

The proposed WAIQ-DT antenna is a top-mount Dielectric model TFU-36GTH-R O4 DC dual-channel (N26/D27), nondirectional antenna. The tower is registered with the FCC and the registration number is 1036422. The support structure is located at 1300 Upper Wetumpka Road in Montgomery, Alabama. The proposed antenna height radiation center is 162.8 meters AGL.

Exhibits

Exhibits 1 and 2 represent WAIQ-DT's administration data, antenna and antenna structure specifications.

Exhibit 3 depicts the profile view of the proposed antenna on the antenna structure with all the appropriate elevations.

Kessler and Gehman Associates, Inc.

Telecommunications Consulting Engineers

Exhibits 4 and 5 display the proposed antenna azimuth pattern and the proposed antenna azimuth pattern tabulation respectively.

Exhibits 6 and 7 display the antenna elevation pattern and Exhibit 8 displays the antenna elevation pattern tabulation.

Exhibit 9 depicts the location of the WAIQ-DT site on a 7.5-Minute (Series) Topographic map.

Exhibit 10 depicts the WAIQ-DT Channel 27 authorized and proposed F(50,90) 41.0 dBuV/m protected noise limited contours and demonstrates that the authorized F(50,90) 41.0 dBuV/m protected noise limited contour would encompass the proposed F(50,90) 41.0 dBuV/m protected noise limited contour in all azimuthal directions.

Exhibit 11 is a distance to contour tabulation sheet depicting the distance in kilometers from the WAIQ-DT transmitter site to the edge of the authorized F(50,90) 41.0 dBuV/m protected noise limited contour in one-degree increments.

Exhibit 12 is a distance to contour tabulation sheet depicting the distance in kilometers from the WAIQ-DT transmitter site to the edge of the proposed F(50,90) 41.0 dBuV/m protected noise limited contour in one-degree increments.

Exhibit 13 depicts the data extracted from Exhibits 11 and 12, compares the distances and demonstrates that the proposed F(50,90) 41.0 dBuV/m protected noise limited contour would be completely encompassed by the authorized F(50,90) 41.0 dBuV/m protected noise limited contour in all azimuthal directions.

Exhibit 14 is a chart, created from the tabulation depicted in Exhibit 13, demonstrating pictorially that the distance from the transmitter site to the proposed F(50,90) 41.0 dBuV/m

contour (red) is less than the distance from the transmitter site to the authorized F(50,90) 41.0 dBuV/m contour (blue) along all radials.

Exhibit 15 depicts the proposed WAIQ-DT F(50,90) 48.0 dBuV/m Principal Community contour, boundaries of the principal community to be served, and the transmitting location with radials every 45°.

Environmental Impact

The proposed construction would have no significant environmental impact as defined in §1.1307 of the FCC Rules. The DTV transmitter, 6-1/8 inch (75-ohm) DigiTLine® and antenna system would produce an ERP of 600 kW. It was determined that the maximum lobe of radiation from the base of the tower out to approximately 1,158.6 feet would occur at approximately 405.1 feet from the base of the tower (665.5-foot radial distance from the antenna center). At approximately 405.1 feet from the base of the tower, the depression angle of the main lobe would be 52.5° below the horizontal. At that point, the relative field would be 0.046 and the power density six feet above the ground would be 0.00164 mW/cm². This is only 0.09% of the Maximum Permissible Exposure (“MPE”) limits for Occupational/Controlled Exposure and only 0.45% of the MPE limits for General Population/Uncontrolled Exposure authorized by the American National Standards Institute (“ANSI”). Since the proposed operation of WAIQ-DT Channel 27 would not exceed 5.0% of the MPE limit for Occupational/Controlled Exposure or General Population/Uncontrolled Exposure at any point on the ground, WAIQ-DT would not be considered a “significant contributor” to the RF exposure environment pursuant to OET Bulletin 65, Edition 97-01. Therefore, contributions of exposure from other sources were not accounted for in this analysis. It is safe to conclude that the emissions would be insignificant and well within the maximum allowable requirements.

Kessler and Gehman Associates, Inc.

Telecommunications Consulting Engineers

If other antennas are placed on the tower in the future, the applicant will cooperate with those users by reducing or completely terminating the power to the antenna when maintenance workers are in danger from the electromagnetic radiation emanating from the antenna.

It is understood that additional "future" antennas mounted on the support structure could increase the overall RF exposure levels and it is the responsibility of each licensee to ensure that the total RF exposure resulting from the operation of all antennas on the support structure do not exceed the maximum permissible exposure level at any point on the ground.

Certification

This technical statement was prepared by William T. Godfrey, Jr., Telecommunications Technical Consultant with Kessler and Gehman Associates, Inc. having offices in Gainesville, Florida and has been working in the field of radio and television broadcast consulting since 1998. He graduated from the University of North Florida with a Bachelor of Arts degree in Criminal Justice and a minor in Mathematics in 1993. As a Professional in the field of Telecommunications he states under penalty of perjury that the information contained in this report is true and correct to the best of his knowledge and belief.

EXHIBIT 10

WAIQ-DT Channel 27 (CP) Distance to Contour Tabulation

Call Letters: WAIQ-DT CP
 File Number: BMPEDT20021122AAW
 Latitude: 32-22-55 N
 Longitude: 086-17-33 W
 ERP: 750.00 kW
 Channel: 27
 Frequency: 551.0 MHz
 AMSL Height: 235.0 m
 Elevation: 75.0 m
 Horiz. Antenna Pattern: Omni
 Type of contour: FCC
 Location Variability: 50.0 %
 Time Variability: 90.0 %
 # of Radials Calculated: 360
 Field Strength: 41.00 dBuV/m
 Primary Terrain: 3 Second US Terrain

Average HAAT for radials shown: 177.0 m

WAIQ-DT Channel 27 (Proposed) Distance to Contour Tabulation

Call Letters: WAIQ-DT (Proposed)
 Latitude: 32-22-55 N
 Longitude: 086-17-33 W
 ERP: 600.00 kW
 Channel: 27
 Frequency: 551.0 MHz
 AMSL Height: 237.8 m
 Elevation: 75.0 m
 Horiz. Antenna Pattern: Omni
 Type of contour: FCC
 Location Variability: 50.0 %
 Time Variability: 90.0 %
 # of Radials Calculated: 360
 Field Strength: 41.00 dBuV/m
 Primary Terrain: 3 Second US Terrain
