

**Supplement to Engineering Statement: Section 307(b)**

This Supplement to the Engineering Statement was prepared by Horizon Broadcast Solutions, LLC on behalf of Southwest FM Broadcasting Co., Inc. (“Southwest FM”), licensee of Station KAHM(FM), Channel 271C (102.1MHz), Prescott, Arizona (Facility ID #61510) in support of its pending application for a minor change in the station’s facilities (BPH-20100813BHN) which includes a request to change the station’s community of license from Prescott to Spring Valley, Arizona.

Subsequent to the filing of the application, the Commission issued Rural Radio, 26 FCC 2556 (2011), petitions for reconsideration pending. This Engineering Statement is submitted to provide additional information (using an alternative methodology) to analyze the losses to “underserved areas” that would result from Southwest FM’s proposal in a manner which is consistent with the new requirements placed upon applicants, such as Southwest FM, which seek to demonstrate that a proposed change of community of license would serve the public interest, as required by Section 307(b) of the Communications Act of 1934, under Priority 4 of Revision of FM Assignment Policies and Procedures, Second Report and Order, 90 FCC 2d 88 (1982). Also, additional indicia have been provided to support Southwest’s claim that Spring Valley is a community for Commission licensing purposes.

The Southwest FM application as initially filed did not include a gain/loss analysis. This was based, in accordance with Commission precedent, on the use of hypothetical circles from the KAHM licensed site and the proposed allotment site. Analysis of all other FM stations was also based on the use of hypothetical circles at the respective stations’ licensed

sites. For AM stations, the analysis was based on the “night-time interference free” contours. Using this methodology, Southwest FM noted that because the KAHM licensed site and allotment sites were virtually identical, there would not be any gain or loss area in its proposed modification of KAHM. Therefore it was believed there was no reason to provide a gain/loss analysis.

It is my understanding that the Commission’s staff is considering the use of an alternative approach which may be replacing the prior approach. Accordingly, Southwest FM is now including an alternate methodology in Exhibit A, which uses actual FCC F(50,50) 60 dBu contours for KAHM from the licensed site and the proposed contours from the application site. Similarly, actual F(50,50) 60 dBu contours are used for all other FM stations. AM stations are analyzed on the basis of night-time interference free contours.

KAHM is a full facility Class C FM station operating with 58 kW @770 meters HAAT. Station KGCB Channel 215C, licensed to Prescott, is also a full Class C FM station. KGCG operates with 58 kW @772 meters HAAT. The KGCB transmitter site is located just 0.04 km (40 meters) NW of the KAHM transmitter site. The slight difference in ERP between the stations creates a slightly larger F(50,50) 60 dBu contour for station KGCB, which entirely encompasses the contour of KAHM. Therefore no white area or population is created by the KAHM proposal. Map 1 of Exhibit A shows the entire KAHM loss area. Map 2 of Exhibit A is a close-up of the loss areas in the western part of the loss area. Map 3 of Exhibit A is a close-up of the other loss area near Payson, AZ, where there is some “underserved” areas with populations.

Exhibit B is a chart showing Section 307(b) criteria based on population gain and loss for Priorities 1 through 4. All data is compiled by comparing the KAHM licensed facility

with the proposed KAHM application site. The data for the Uniform Terrain FCC Method is based on 2000 Census data. The Actual Terrain Method data is based on 2010 Census data.

Based on the alternate methodology supplied as Exhibit A for determining remaining services with actual contours from the application site, the proposed KAHM modification will produce no white or gray area and there is no population that will receive fewer than three remaining services. There are 277 persons in the loss areas who will receive three (3) services and there are 805 persons in the loss areas who will receive four (4) services. Thus the total “underserved population” in the loss areas (under the alternate methodology) is 1,082 persons. This represents 0.33% of the 326,122 persons within the current KAHM 60 dBu protected contour and represents 0.065% of the 1,651,918 persons within the proposed KAHM protected contour.<sup>1</sup> The modified KAHM facility would provide the gain of a 36<sup>th</sup> (or greater) service to 734,493 persons, which represents the majority, or 50.6 percent, of the population gaining service. The modified KAHM would produce the loss of a 17<sup>th</sup> (or lesser) service, to 69,398 persons which represents the majority, or 58.6 percent, of the population losing service.

Exhibit C is a map showing the current FCC F(50,50) 70 dBu contour of KAHM. The KAHM principal community contour reaches 100% of the Prescott Valley-Prescott, AZ Urbanized Area and 75.2% of the Flagstaff, AZ Urbanized Area. Therefore the KAHM license facility is considered to be providing service to two Urbanized Areas.

---

<sup>1</sup> In this analysis, the 60 dBu contour for the actual licensed facilities has been used for FM station. Only those new stations for which construction permits have been issued are included. The night-time interference free contour has been used for AM stations. Vacant allotments and construction permits for licensed stations have not been included in the analysis.

Exhibit D is a map showing the proposed FCC F(50,50) 70 dBu contour of KAHM. The proposed KAHM as modified to specify Spring Valley as the community of license will continue to provide 100% coverage of the Prescott Valley-Prescott AZ Urbanized Area. The contour will no longer cover any of the Flagstaff Urbanized Area. There will be no change to the number of services received at either Prescott or Spring Valley. Prescott will continue to receive service from between 13 and 20 full power AM and FM stations, and Spring Valley will continue to receive service from 9 or 10 full power AM and FM stations. The proposed KAHM facility will reach only 3.4% of the Phoenix-Mesa, AZ Urbanized Area and none of the Goodyear-Avondale, AZ Urbanized Area.

Exhibit E is a map showing the Section 73.207 spacing distances to the stations that prohibit KAHM from relocating to any tower site that would provide an FCC F(50,50) 70 dBu contour to 50% or more or any other Urbanized Area. The only other Urbanized Areas within 150 kilometers of the proposed KAHM application site are Phoenix-Mesa, AZ and Avondale-Goodyear, AZ. Those two Urbanized Areas are shown on the Exhibit D map. It is not possible for KAHM to provide 50% or greater coverage to either of these Urbanized Areas.

Exhibit F is additional indicia supporting Southwest's belief that Spring Valley, Arizona qualifies as a "community" for Commission licensing purposes. Data from the 2010 Census has been released since the KAHM application was filed. Spring Valley continues to be listed by the U.S. Census Bureau as a "CDP", Census Designated Place. The population of Spring Valley has increased by 12.6 percent, from 1,019 to 1, 148 persons. The supplement includes numerous references including news stories, real estate listings and advertisements for local businesses that all refer to Spring Valley in a manner consistent with a "community".

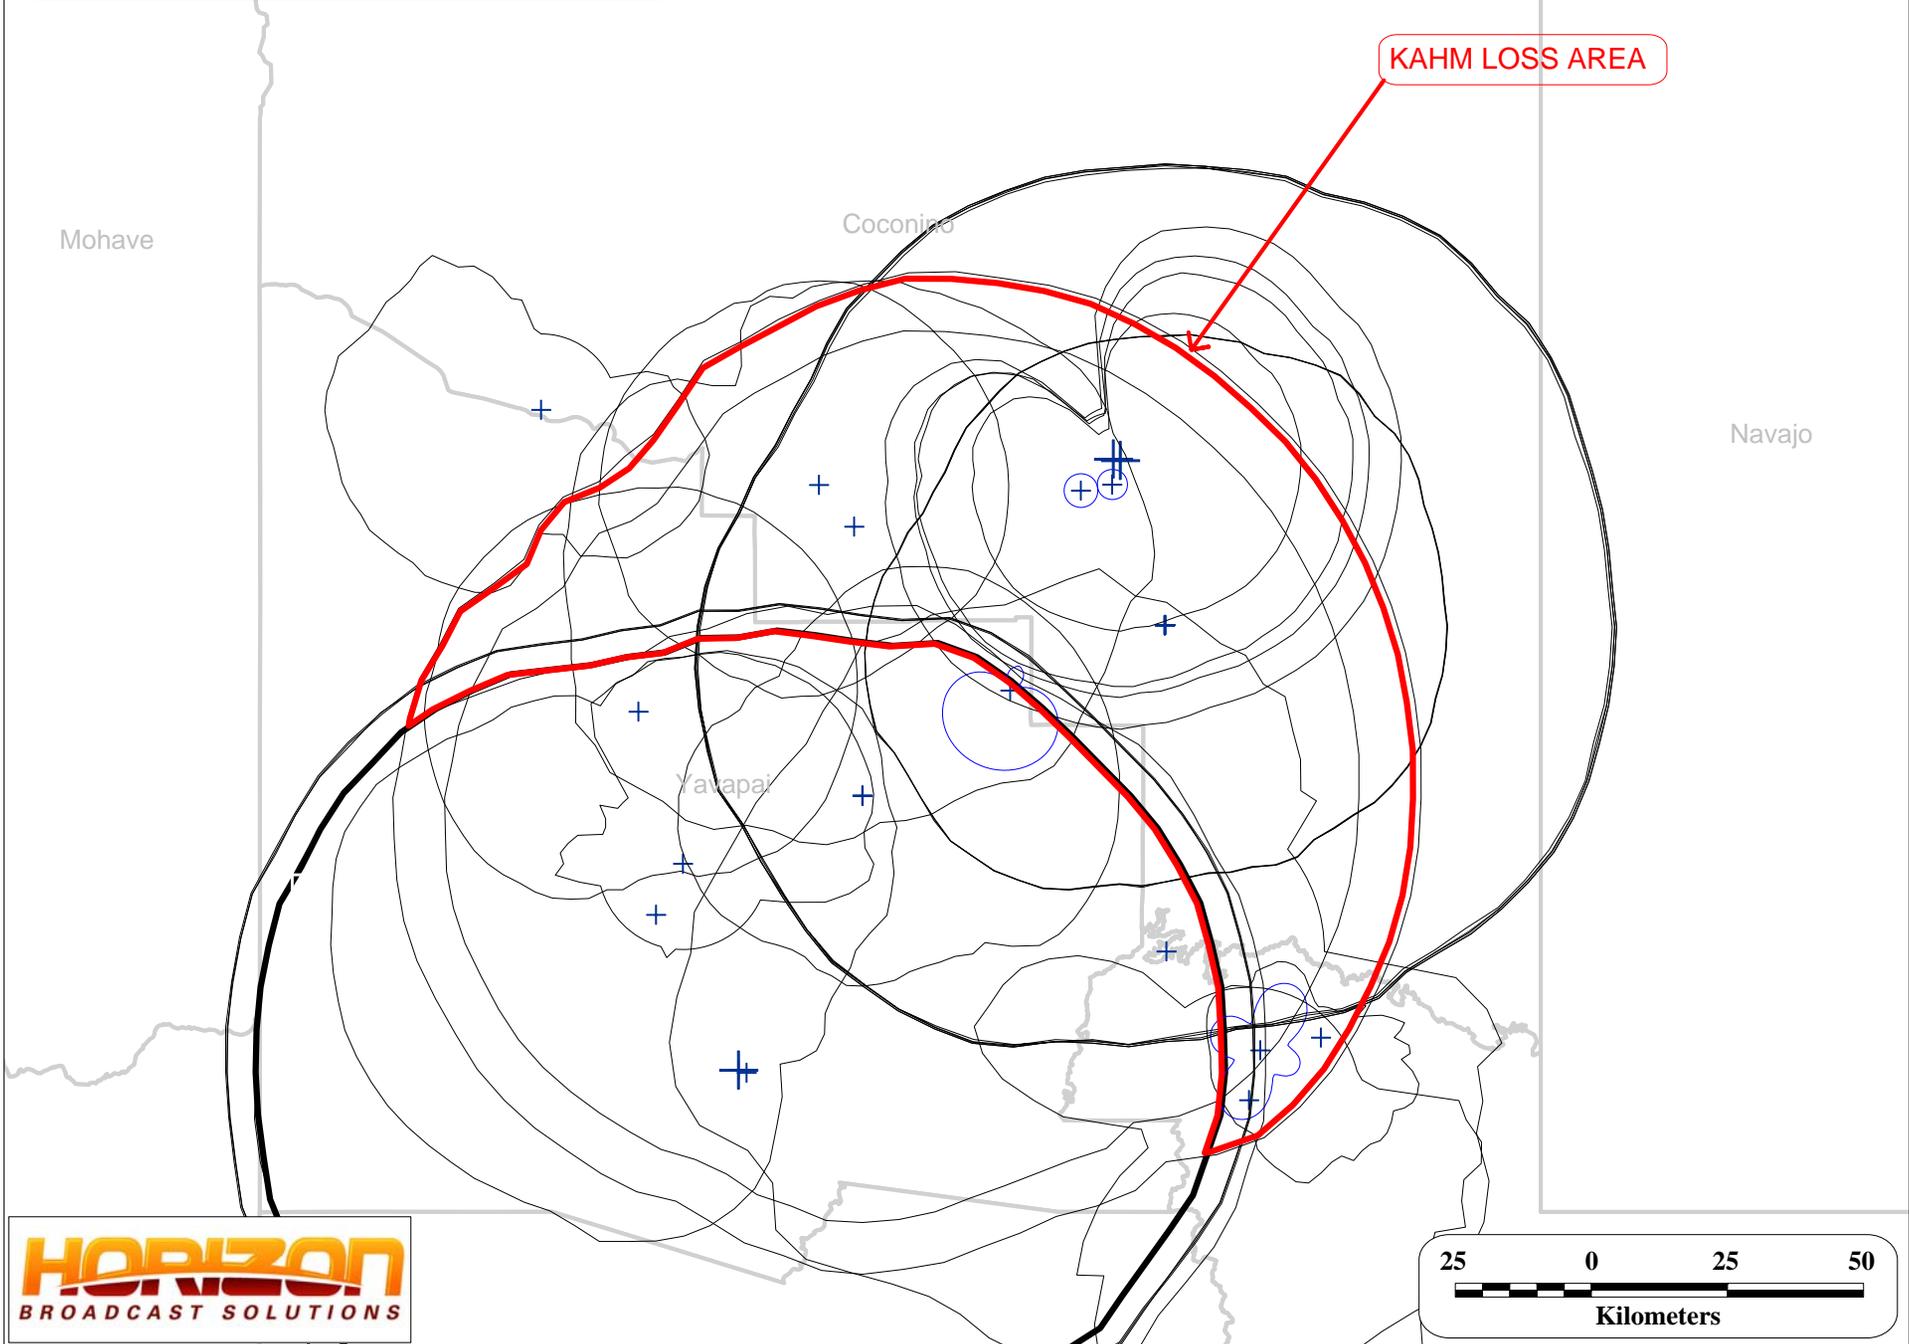

Table 1 (“Granular Analysis of Population and Number of Services in Gain/Loss Areas”) is a summary breakdown of the population totals for the number of services which would be received in both the gain and loss areas. Table 2 is a detailed breakout of the 84 loss areas, which includes the call letters of each station in every service area. For example, the loss area which will continue to receive five (5) stations is listed, with the population in that area, as well as the call letters of the five stations that continue to provide service to that area. Similarly, Table 3 is a detailed breakout of the 219 gain areas which includes the call letters of each station in every service area.

## Spring Valley water customers chafe under severe restrictions

By HEIDI DAHMS FOSTER  
Special to the Daily Courier

More than 210 people left a community meeting in **Spring Valley** Wednesday night with little more information than when they came about water shortages in the **Spring Valley** area.

District 2 County Supervisor Tom Thurman called the meeting after he received complaints from residents of **Spring Valley** and Bensch Ranch about Stage 4 water restriction notices they received earlier this month from Bradshaw Mountainview Water Co. Thurman said he asked those connected with the water service to meet at **Spring Valley** Community Church so people could have their questions answered.

Heidi Dahms Foster/Courtesy photo

A standing-room-only crowd of more than 210 people filled the **Spring Valley** Community Church to hear about water shortages in the area Wednesday night.

Unfortunately, he said, neither Tim Kylo, owner of Bradshaw Mountainview Water Co., or representatives of the Corporation Commission, which oversees small water companies in Arizona, would attend the meeting.

"I'm trying to squelch some fears and rumors that are going around," Thurman said. "I have tried diligently to get people who are in authority in the water company to get here, and they didn't show."

Instead, he said, Kylo sent a written statement about the water situation.

Kylo's statement said his company was having a difficult time keeping up with the demand for water, but that storage water levels had rebounded from zero to almost 50 percent since Stage 4 restrictions went into effect the first week of June.

The restrictions prohibit residents from using water for virtually any outdoor use - watering landscaping, washing cars, filling pools or spas, or any other water-intensive activity.

The statement says Bradshaw Mountainview Water Co. first became aware that well production was beginning to decrease on May 13.

"We noticed that one of our wells was not producing as much as normal, so we began sounding all of our wells and discovered the depth to water while the pump was running had lowered, and therefore the production of the well had diminished. We immediately curtailed construction water and began monitoring well production on a daily basis," the statement read.

Representatives from Sundt Construction, ADOT, Mayer Fire and Yavapai County answered questions from the audience.

One of the most contentious issues was the sale this past year by Kylo of water for the construction of the I-17/Cordes Junction Interchange project. The project used nearly 14 million gallons of water in 11 months, piping the water from the **Spring Valley** area. Project manager Brent Freeman said Vastco/Sundt Construction contracted with BMWVCO for the water.

Audience members asked why Kylo was allowed to sell the water for construction. Thurman said Kylo was within his rights as long as he adheres to Corporation Commission regulations for water supplies.

"I went to Gary Pierce at the Corporation Commission, and he said their investigations show

that (Bradshaw Mountainview Water Co.) is well within their boundaries of running their operation," Thurman said.

Greg Gentsch, ADOT district engineer, said ADOT stopped using the water as soon as they heard about shortages.

"We knew the project would take a lot of water from the get-go. When we recognized there were going to be some severe conditions here, we worked with the contractor to back them off (using Bradshaw Mountainview Water Co. water)," he said.

Gentsch said the company is far enough along in the job that they now will find alternate water supplies from different sources to finish, including the well at the ADOT yard at Cordes Junction.

Bradshaw Mountainview Water Co. in its statement asserts that the company feels the water sold for the interstate project did not cause the current shortage.

"It is a well-known fact that water flows downhill," the letter states, "and the water that was pumped out of the ground last month would not defy gravity and stay around so we could pump it out of the ground today. If you are looking for water use that affects our area it would make more sense to look upstream."

Another factor that could be affecting water stores in the Bradshaw Mountainview Water Co. area is ongoing trenching and placement of conduit by RACE Grading, a company contracted by Arizona Public Service, so APS can replace 34,000 feet of aging electrical line.

APS spokesman Damon Grose said this past week that the work was necessary, but the Bradshaw Mountainview Water Co. cannot locate some of their water lines, and the construction company has had difficulty getting accurate Blue Staking. That has resulted in at least 15 water line breaks. Additionally, residents said, RACE has been getting water from Bradshaw Mountainview Water Co. for the construction, even after the Stage 4 restrictions went into effect.

Thurman said on Thursday that he contacted APS after the meeting and Community Development Consultant Matt Meierbochtel assured him that RACE no longer would use water from BMVWCO until the restrictions are lifted.

Mayer Fire Chief Glenn Brown said the water restrictions would not affect fire service.

"We bring our own water with us, and we have ways of working around the issues as far as fire protection," he said.

Brown explained that firefighters did not use water from Bradshaw Mountainview Water Co. to fight two recent fires, the Gladiator Fire and a median fire on I-17 south of Cordes Junction. Instead, they used water from an industrial park in the Dewey-Humboldt area. Additionally, the Mayer Fire Department main station across from Bensch Ranch has its own well.

One audience member pressed Brown, stating that all of the water comes from the same table. That brought up another bone of contention with residents who cannot currently water their landscaping. Mayer High School also has its own well and has been watering its athletic fields day and night.

Mayer School Superintendent Dean Slaga said the school drastically cut back on watering after he heard about the restrictions. The school cannot pull enough water at night to efficiently water the fields, he said, so it had been watering during the day as well. But after attending Wednesday's meeting, he planned to issue an order to shut down watering of the fields altogether.

Slaga said the grass on the fields will die, and the district will have to reseed and build them back up when the water crisis is over.

Thurman encouraged residents to contact the Corporation Commission with their concerns about Bradshaw Mountainview Water Co. Meanwhile, there was no word Thursday about when the company will lift the restrictions, and in more than 100-degree days, residents are either hauling water or watching their landscaping die.

# The Big Bug Neighborhood

Mayer-Spring Valley-Cordes Lakes, Arizona

Welcome to the Big Bug Neighborhood in Central Arizona! Enjoy a leisurely stroll through the site and see what is going on in Mayer, **Spring Valley** and Cordes Lakes.

The tri-community area sponsors many events and activities, made possible by the hard work and dedication of our local residents and businesses here in The Big Bug Neighborhood.

# DESERT ROUTES

Welcome to our site!

Desert Routes is a trio playing a combination of western, western swing and country music. The group consists of Ross Riggs on rhythm guitar and fiddle, Fran Riggs on bass and Bernie Seely on lead guitar. All three sing lead vocals and harmonies and have been playing music together at jam sessions and festivals for the last seven years. The group was officially formed and named Desert Routes in February 2007 and performed at the Festival of the West in Phoenix in March of 2007 and at the Arizona Cowboy Symposium at Sonoita, Arizona in November 2007. Ross and Fran Riggs, formerly from Tucson, Arizona with many years playing country, western & western swing music around Tucson, now make their home at [Spring Valley, Arizona](#). Bernie Seely is from Meadview, Arizona and has been playing the guitar for more than 60 years. He has many years experience playing lead guitar in country bands in Arizona and California and has performed at the Grand Ole Opry.

**WELCOME TO SPRING RIDGE ACADEMY**

We welcome your interest in Spring Ridge Academy because we know it can lead to success for your child - not just academic success, but success in life. With that success comes confidence, and the ability to have the kind of relationship you and your child both desire.

Spring Ridge Academy is an all girls, therapeutic boarding school serving students ages 13 - 17 in grades 9 - 12. Spring Ridge combines an empowering emotional growth program with a sophisticated therapeutic approach and a rigorous college prep curriculum. Not only are students immersed in an environment dedicated to fostering maturity and confidence, the entire family is included in the process, creating an atmosphere of change, collaboration and hope. The catalyst for creating this change is a powerful, affirmative and nurturing program that creates confidence and competence in core areas: emotional, physical, academic, community, and family.

At Spring Ridge Academy, students confront and master the self-limiting beliefs, attitudes, and behaviors separating them from success. Low self-esteem, social inappropriateness, poor school performance - these are challenges to be managed, not immovable roadblocks.

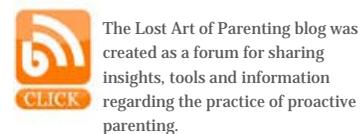

*"The young woman that I knew was hidden inside of my struggling daughter has come out! She is even more beautiful than I imagined."*

Suspect Arrested in Spring Valley Homicide \*\*\* PRELIMINARY INFORMATION – On February 11, 2011, at approximately 10:30 AM, Yavapai County Sheriff's Office deputies responded to the report of a dead body in the 17300 block of East Spring Valley Road, [Spring Valley](#).

Fire personnel were already on scene and deputies discovered the body of 52-year-old Michael Crummey inside a studio apartment at the location.

Detectives from the YCSO Criminal Investigations Bureau arrived shortly thereafter to handle the investigation.

They spoke with an acquaintance of Crummey, 48-year-old Karey Rowley, who had originally called 911 after discovering Crummey was nonresponsive.

Rowley told detectives that he and Crummey had been drinking overnight inside the apartment.

When Rowley awoke in the morning, he initially thought Crummey was passed out.

After a period of time elapsed, Rowley called 911.

Detectives observed a gunshot wound to Crummey's abdomen.

A rifle was recovered from the apartment.

On Sunday, February 13, 2011, Crummey's autopsy was conducted and the Medical Examiner ruled the death was a homicide.

Based on this conclusion and evidence gathered during the subsequent investigation, detectives arrested Rowley on Sunday afternoon for 2<sup>nd</sup> Degree Murder.

He was booked at the Camp Verde Detention Center and remains in-custody without bond.

The investigation is ongoing.
