**Subject:** KAAAY

Son,

In reviewing the recently issued license for KAAAY (attached) we find condition #2 on the license reads:

*"Ground System Description: 240 radials about each tower approximately 1.8 meters above ground for 13.7 meters. Beyond this elevated screen, there are 240 radials about each tower out to 137.2 meters or at point of overlap. Radials are bonded to strap midway between towers."*

We note the counterpoise ground system portion has been replaced with a buried ground system as indicated in the 302-AM for KAAAY. This was necessary due to theft (twice) of the elevated ground system. The MoM proof was conducted with the buried ground system.

If it is possible please re-issue the license without the elevated ground system.

If you need anything else please let me know.
