

**Exhibit 11**  
**Edgewater Broadcasting, Inc.**  
**Adjacent Interference**  
**Ames, Iowa**

The Proposed translator on FM Channel 260D with facilities of 92.0 Watt ERP at 138 meters AAT is within the 60 dBu contours of stations KMXD on 2nd upper adjacent Channel 262. The KMXD contour at the translator site is 88.55 dBu (F50,50). Based upon the ratio of 100:1 (translator to KMXD on the upper 2nd adjacent channel) the population within the proposed translator 128.55 dBu is zero. The interference area is calculated by the free space equation to extend 80 meters from the antenna. The antenna is 116 meters above ground level, thus the interference area will never reach the ground. Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."
