**Interference Area to WBZZ and WPYX**  
**Troy, New York**

The Proposed translator is within the 57 dBu contour of lower second adjacent station WBZZ, channel 289, and the 54 dBu contour of upper second adjacent station WPYX channel 293. The WBZZ contour at the translator site is 140 dBu F(50,50) and the WPYX contour at the translator site is 73 dBu F(50,50). Using the ratio of 100:1 (translator to WBZZ and WPYX) on the second adjacent channel, the population within the proposed translator 180 dBu and 113 dBu contour is zero. Using the free space equation, the predicted interference area is expected to extend 0 meters for WBZZ, and 50 meters for WPYX, from the antenna. The antenna is 80 meters above ground level thus the interference area will never reach the ground. As can be seen in Exhibit 12 Figures 3 and 4, a topographic map, and an aerial photograph have been provided that show the Proposed site.

These figures indicate that there are no structures or elevated roadways within the 50 meter interference area of the translator. Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."

The map displays the Albany, New York area with a grid of latitude and longitude coordinates. The proposed station, WBZZ, is located near the center of the map, with a coverage area indicated by a red circle. The map also shows the coverage areas of existing stations: W288BZ (blue circle), WYJB (blue circle), WDPX (blue circle), and WHDQ (red line). The map is titled 'Albany, New York' and includes a scale bar in kilometers.
