Building Great Radio Stations

Statement of Certifying Engineer

I hereby affirm that:

I am a Certified Senior Radio Broadcast Engineer by the Society of Broadcast Engineers.

I have been employed in the Radio Broadcast Industry since 1984.

I am employed by Broadcast Works, an engineering firm specializing in broadcast facilities and have been so employed since 1997.

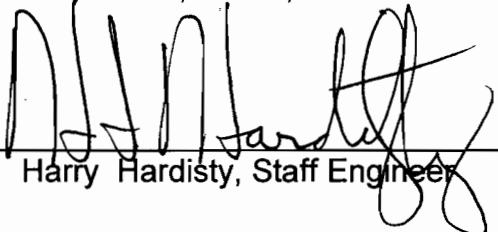

Broadcast Works was employed by East Texas Media Association, Inc, licensee of KBJs, to certify that their antenna is installed according to the manufacture's instructions and my assignment was to make that determination.

Radio station KBJs had purchased and installed a Jampro JADP-2-2(4)-DA, with cavities of eight and ten feet. According to Jampro's installation instructions, the eight foot cavities were to have a bearing of 16.4 degrees and the ten foot cavities a bearing of 230.0 degrees, from true north.

To verify that the correct cavities are mounted in the correct direction, Kristopher Morgan, of Affiliated Surveyors, Inc., Rusk, Texas, surveyed the correct headings to which the antenna cavities should be pointing. Next, using a transit, I was able to use the points he plotted and determine that the antenna is oriented in the correct directions.

The installation of this antenna was completed under my direct supervision and I am satisfied that it was completed according to the manufacturer's instructions.

All statements, herein, are true to the best of my knowledge.

Harry Hardisty, Staff Engineer
