Dear Mr. William Luebkekmann,

After careful analysis of WMVB antenna base current ratios, antenna monitor parameters, the common point current reading, and other parameters and information at hand, it is my initial conclusion that the installation of your FM translator (FCC facility I.D. #141526) which is installed adjacent to the WMVB North transmitting tower has not noticeably affected the directional antenna pattern or other operating parameters of Standard Broadcast Radio Station WMVB operating on a frequency of 1440 KHz. Please feel free to contact me if there are any further questions regarding this matter.

sincerely,

A handwritten signature in black ink, appearing to read 'Richard F. Arsenault', with a stylized, flowing script.

Richard F. Arsenault,  
WMVB Technical Director
