Application for Digital Television Station Construction Permit

prepared for

WISN Hearst Television Inc.

WISN-TV Milwaukee, WI

Facility ID 65680

Ch. 34 1000 kW 303 m

WISN Hearst Television Inc. (“Hearst”) is the licensee of television station WISN-TV, digital Channel 34, Milwaukee, WI (BLCDT-20050412ADP). WISN-TV is licensed to operate with an effective radiated power (“ERP”) of 863 kW with a side mounted directional antenna at 263 meters height above average terrain (“HAAT”). *Hearst* herein seeks a Construction Permit to increase the WISN-TV facility to 1000 kW ERP and 303 meters HAAT.

The proposed facility will employ a new directional antenna system to be installed at the top-mount position on the existing WISN-TV tower structure, having FCC Antenna Structure Registration (“ASR”) number 1035766. No change to the overall structure height is proposed. The proposed Channel 34 antenna will replace the existing Channel 12 antenna which was associated with WISN-TV’s former analog operation.

The proposed antenna is an elliptically polarized Dielectric model TFU-31ETT/VP-R 4C160 (33 percent vertical polarization). The maximum horizontally polarized ERP is 1000 kW, and the maximum vertically polarized ERP is 330 kW. The vertically polarized component will not exceed the horizontally polarized component at any azimuth.

The antenna will employ 1.0 degree of electrical beam tilt, along with 0.35 degree of mechanical beamtilt at an azimuth of 170 degrees True. The antenna’s horizontal plane pattern,

expressed in terms of relative field without consideration of the mechanical beamtilt, is supplied in **Figure 1** (horizontal polarization) and **Figure 1A** (vertical polarization). **Figure 1B** depicts the horizontal plane relative field pattern (horizontal polarization) with the introduction of the mechanical beamtilt, as determined towards the radio horizon along each azimuth and scaled per the Commission's policies.

Table 1 presents a tabulation of the horizontal plane relative field pattern, to supplement the relative field data within the Form 301 Section III-D "Tech Box" (item 10e). **Table 1** includes pertinent terrain elevation data and provides the derivation of the relative field pattern towards the radio horizon. **Figures 2** and **2A** graphically present the theoretical vertical plane (elevation) pattern for the antenna system. Along each azimuth (considering the mechanical beamtilt), radiation at any angle above horizontal elevations does not exceed the maximum radiation realized at horizontal or below.

Digitized USGS 3 arc-second terrain data was employed. Pursuant to §73.625(b)(4) the calculated average terrain elevation and associated HAAT have been adjusted due to the proximity of the site to the shoreline of Lake Michigan (see **Figure 3**). The 45 and 90 degree radials have been omitted. The 135 degree radial has been truncated to include only the part of the radial extending from 3.2 kilometers to the water's edge. Considering the omitted and truncated radials, the proposed antenna's resulting HAAT is 302.7 meters.

The standard predicted coverage contours are depicted in **Figure 3**. This map includes the location of Milwaukee, WISN-TV's principal community. As demonstrated thereon, the proposed facility complies with §73.625(a)(1), as the entire principal community will be encompassed by the 48 dB μ contour.

The proposed WISN-TV facility's predicted service population provides a 103.8 percent match of the Appendix B allotment facility (MB Docket 87-268, FCC 08-72), as detailed in the following table.

Digital Television Population Summary

Population Summary (2000 Census) OET Bulletin 69 method	Appendix B	Proposed
Within Noise Limited Contour	2,684,970	2,766,639
Not affected by terrain losses	2,661,761	2,765,000
Lost to all interference	1,178	2,101
Net DTV Service	2,660,583	2,762,899
Match of Appendix B	---	103.85%

The proposed facility expands the WISN-TV service contour beyond that established by Appendix B values. A detailed interference study per OET Bulletin 69¹ shows that the proposal complies with the 0.5 percent limit of new interference caused to pertinent nearby digital television stations. The interference study output report is provided as **Table 2**. Protection requirements towards authorized Class A stations are also satisfied.

The nearest FCC monitoring station is 171 km distant at Allegan, MI. This exceeds by a large margin the threshold minimum distance specified in §73.1030(c)(3) that would suggest consideration of the monitoring station. The site is not located within the areas requiring coordination with “quiet” zones specified in §73.1030(a) and (b). There are no AM stations within 3.2 kilometers of the site, based on information contained within the Commission’s database. The site location is beyond the border areas requiring international coordination.

Human Exposure to Radiofrequency Electromagnetic Field (Environmental)

The proposed transmitting antenna’s installation will involve a replacement top-mounted antenna. The use of existing transmitting locations has been characterized as being environmentally preferable by the Commission, according to Note 1 of §1.1306 of the FCC Rules. Since no change in height is proposed, it is believed that this application may be categorically excluded from environmental processing pursuant to §1.1306 of the Commission’s rules.

¹FCC Office of Engineering and Technology Bulletin number 69, *Longley-Rice Methodology for Evaluating TV Coverage and Interference*, February 6, 2004 (“OET-69”). The implementation of OET-69 for this study followed the guidelines of OET-69 as specified therein. A standard cell size of 2 km was employed. Comparisons of various results of this computer program (run on a Sun Sparc processor) to the Commission’s implementation of OET-69 show excellent correlation.

The proposed operation was evaluated for human exposure to RF energy using the procedures outlined in the Commission's OET Bulletin Number 65. Based on OET-65 equation (10), and considering 10 percent antenna relative field in downward elevations, the calculated signal density near the tower at two meters above ground level attributable to the proposed facility is $4.2 \mu\text{W}/\text{cm}^2$, which is 1.1 percent of the general population/uncontrolled maximum permitted exposure limit. This is below the five percent threshold limit described in §1.1307(b) regarding sites with multiple emitters, categorically excluding the applicant from responsibility for taking any corrective action in the areas where the proposal's contribution is less than five percent.

The general public will not be exposed to RF levels attributable to the proposal in excess of the FCC's guidelines. RF exposure warning signs will continue to be posted. With respect to worker safety, the applicant will coordinate exposure procedures with all pertinent stations and will reduce power or cease operation as necessary to protect persons having access to the site, tower or antenna from RF electromagnetic field exposure in excess of FCC guidelines.

Certification

The undersigned hereby certifies that the foregoing statement and associated attachments were prepared by him or under his direction, and that they are true and correct to the best of his knowledge and belief.

Evaluation toward Class A Stations

Contour overlap to Class A station
WEDE-CA 34 ARLINGTON HEIGHTS IL BLTTA 20050308AAS
Station inside contour of Class A station
WMLW-CA 41 MILWAUKEE WI BLTTA 20021002AAA

Class A Evaluation Complete

Proposed facility OK to FCC Monitoring Stations

Proposed facility OK toward West Virginia quiet zone

Proposed facility OK toward Table Mountain

Proposed facility is beyond the Canadian coordination distance

Table 2 WISN-TV OET Bulletin 69 Interference Study
(worst-case scenarios shown page 2 of 20)

Proposed facility is beyond the Mexican coordination distance

Proposed station is OK toward AM broadcast stations

SECTION III-D - DTV Engineering

Complete Questions 1-5, and provide all data and information for the proposed facility, as requested in Technical Specifications, Items 1-13.

Pre-Transition Certification Checklist: An application concerning a pre-transition channel must complete questions 1(a)-(c), and 2-5. A correct answer of "Yes" to all of the questions will ensure an expeditious grant of a construction permit application to change pre-transition facilities. However, if the proposed facility is located within the Canadian or Mexican borders, coordination of the proposal under the appropriate treaties may be required prior to grant of the application. An answer of "No" will require additional evaluation of the applicable information in this form before a construction permit can be granted.

Post-Transition Expedited Processing. An application concerning a post-transition channel must complete questions 1(a), (d)-(e), and 2-5. A station applying for a construction permit to build its post-transition channel will receive expedited processing if its application (1) does not seek to expand the noise-limited service contour in any direction beyond that established by Appendix B of the Seventh Report and Order in MB Docket No. 87-268 establishing the new DTV Table of Allotments in 47 C.F.R. § 73.622(i) ("new DTV Table Appendix B"); (2) specifies facilities that match or closely approximate those defined in the new DTV Table Appendix B facilities; and (3) is filed within 45 days of the effective date of Section 73.616 of the rules adopted in the Report and Order in the Third DTV Periodic Review proceeding, MB Docket No. 07-91.

1. The proposed DTV facility complies with 47 C.F.R. Section 73.622 in the following respects:	
(a) It will operate on the DTV channel for this station as established in 47 C.F.R. Section 73.622.	<input checked="" type="radio"/> Yes <input type="radio"/> No
(b) It will operate a pre-transition facility from a transmitting antenna located within 5.0 km (3.1 miles) of the DTV reference site for this station as established in 47 C.F.R. Section 73.622.	<input type="radio"/> Yes <input checked="" type="radio"/> No
(c) It will operate a pre-transition facility with an effective radiated power (ERP) and antenna height above average terrain (HAAT) that do not exceed the DTV reference ERP and HAAT for this station as established in 47 C.F.R. Section 73.622.	<input type="radio"/> Yes <input checked="" type="radio"/> No
(d) It will operate at post-transition facilities that do not expand the noise-limited service contour in any direction beyond that established by Appendix B of the Seventh Report and Order in MB Docket No. 87-268 establishing the new DTV Table of Allotments in 47 C.F.R. § 73.622(i) ("new DTV Table Appendix B").	<input type="radio"/> Yes <input checked="" type="radio"/> No <input type="radio"/> N/A
(e) It will operate at post-transition facilities that match or reduce by no more than five percent with respect to predicted population from those defined in the new DTV Table Appendix B.	<input checked="" type="radio"/> Yes <input type="radio"/> No <input type="radio"/> N/A
2. The proposed facility will not have a significant environmental impact, including exposure of workers or the general public to levels of RF radiation exceeding the applicable health and safety guidelines, and therefore will not come within 47 C.F.R. Section 1.1307. Applicant must submit the Exhibit called for in Item 13.	
3. Pursuant to 47 C.F.R. Section 73.625, the DTV coverage contour of the proposed facility will encompass the allotted principal community.	
4. The requirements of 47 C.F.R. Section 73.1030 regarding notification to radio astronomy installations, radio receiving installations and FCC monitoring stations have either been satisfied or are not applicable.	
5. The antenna structure to be used by this facility has been registered by the Commission and will not require registration to support the proposed antenna, OR the FAA has previously determined that the proposed structure will not adversely effect safety in air navigation and this structure qualifies for later registration under the Commission's phased registration plan, OR the proposed installation on this structure does not require notification to the FAA pursuant to 47 C.F.R. Section 17.7.	

SECTION III-D - DTV Engineering**TECHNICAL SPECIFICATIONS**

Ensure that the specifications below are accurate. Contradicting data found elsewhere in this application will be disregarded. All items must be completed. The response "on file" is not acceptable.

TECH BOX

1. Channel Number: DTV 34 Analog TV, if any
2. Zone: <input checked="" type="radio"/> I <input type="radio"/> II <input type="radio"/> III
3. Antenna Location Coordinates: (NAD 27) Latitude: Degrees 43 Minutes 6 Seconds 42 <input checked="" type="radio"/> North <input type="radio"/> South Longitude: Degrees 87 Minutes 55 Seconds 42 <input checked="" type="radio"/> West <input type="radio"/> East
4. Antenna Structure Registration Number: 1035766 <input type="checkbox"/> Not Applicable <input type="checkbox"/> Notification filed with FAA
5. Antenna Location Site Elevation Above Mean Sea Level: 190 meters
6. Overall Tower Height Above Ground Level: 337.7 meters
7. Height of Radiation Center Above Ground Level: 327.9 meters
8. Height of Radiation Center Above Average Terrain : 302.7 meters
9. Maximum Effective Radiated Power (average power): 1000 kW

10. Antenna Specifications:

a. Manufacturer DIE Model TFU-31ETT/VP-R 4C160

b. Electrical Beam Tilt:
1 degrees Not Applicable

c. Mechanical Beam Tilt:
0.35 degrees toward azimuth
170 degrees True Not Applicable

Attach as an Exhibit all data specified in 47 C.F.R. Section 73.625(c). [Exhibit 43]

d. Polarization:
 Horizontal Circular Elliptical

e. Directional Antenna Relative Field Values: Not applicable (Nondirectional)

[For a composite directional (not off-the-shelf) antenna, press the following button to fill in the relative field values subform.]
[Relative Field Values]

10e. Directional Antenna Relative Field Values

[Fill in this subform for a composite directional (not off-the-shelf) antenna, only.]

[Relative Field Polar Plot](#)

If a directional antenna is proposed, the requirements of 47 C.F.R. Sections 73.625(c) must be satisfied. **Exhibit required.** [Exhibit 44]

11. Does the proposed facility satisfy the pre-transition interference protection provisions of 47 C.F.R. Section 73.623(a) (Applicable only if **Certification Checklist** Items 1(a), (b), or (c) are answered "No.") and/or the post-transition interference protection provisions of 47 C.F.R. Section 73.616?
 Yes No
If "No," attach as an Exhibit justification therefor, including a summary of any related previously granted waivers. [Exhibit 45]

12. If the proposed facility will not satisfy the coverage requirement of 47 C.F.R. Section 73.625, attach as an Exhibit justification therefore. (Applicable only if **Certification Checklist** item 3 is answered "No.") [Exhibit 46]

13. **Environmental Protection Act. Submit in an Exhibit** the following:
If **Certification Checklist** Item 2 is answered "Yes," a brief explanation of why an Environmental Assessment is not required. Also describe in the Exhibit the steps that will be taken to limit RF radiation exposure to the public and to persons authorized access to the tower site.

By checking "Yes" to **Certification Checklist** Item 2, the applicant also certifies that it, in coordination with other users of the site, will reduce power or cease operation as necessary to protect persons having access to the site, tower or antenna from radiofrequency electromagnetic exposure in excess of FCC guidelines.

If **Certification Checklist** Item 2 is answered "No," an Environmental Assessment as required by 47 C.F.R. Section 1.1311. [Exhibit 47]

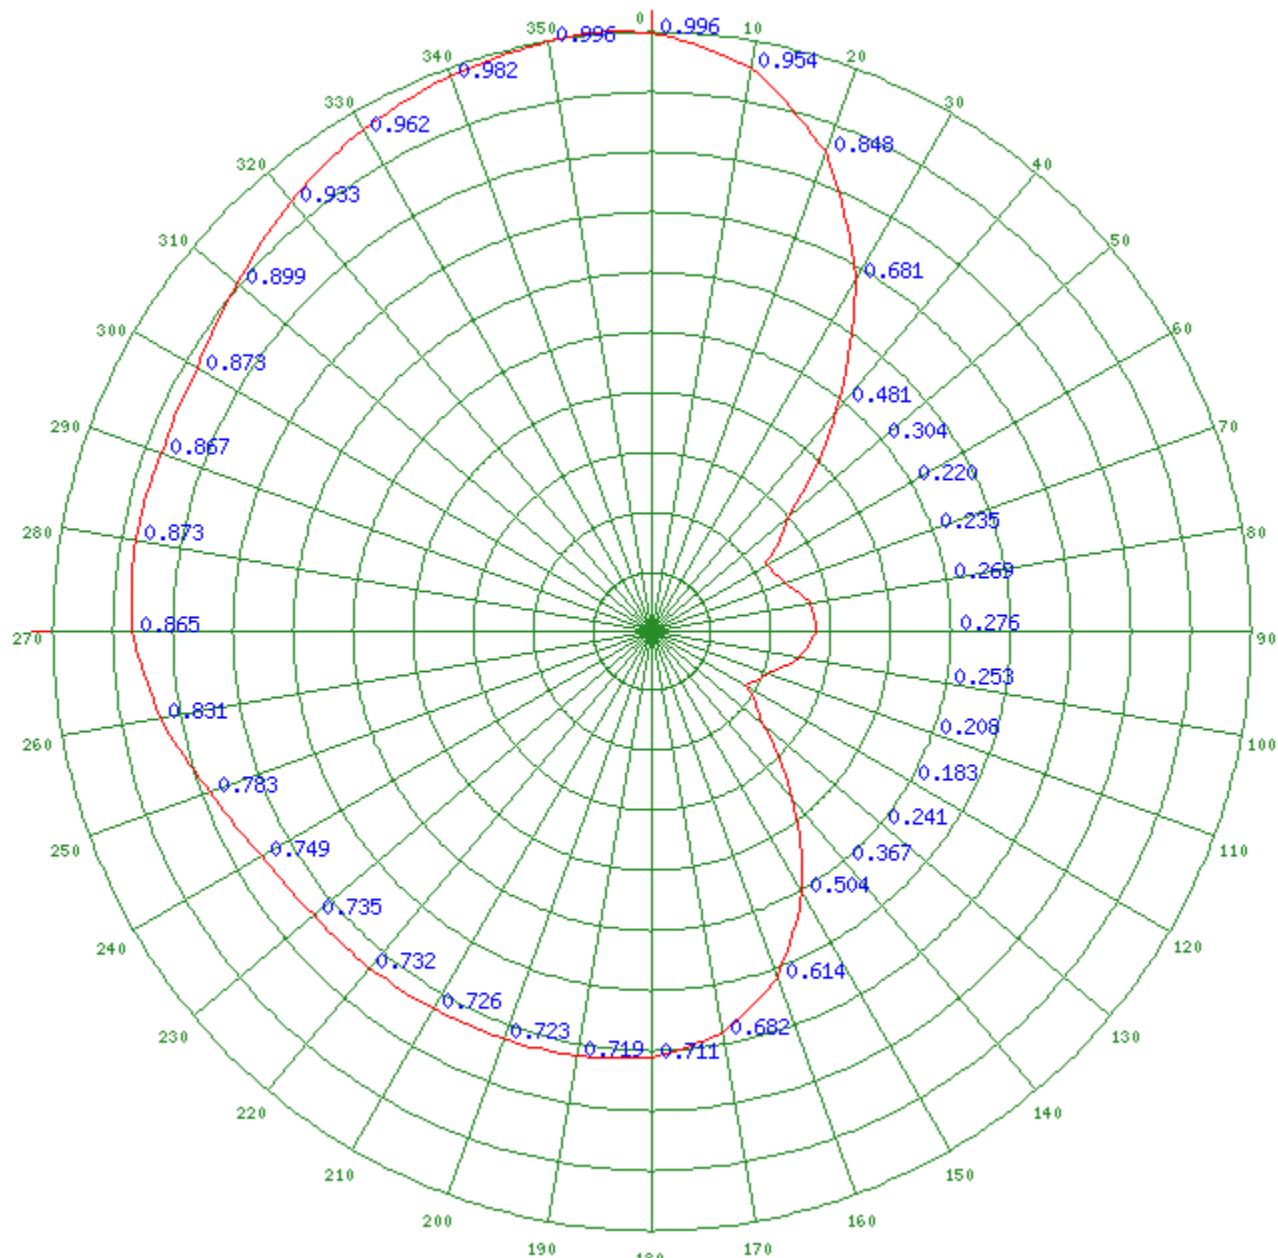

PREPARERS CERTIFICATION ON SECTION III MUST BE COMPLETED AND SIGNED.

SECTION III - PREPARER'S CERTIFICATION

I certify that I have prepared Section III (Engineering Data) on behalf of the applicant, and that after such preparation, I have examined and found it to be accurate and true to the best of my knowledge and belief.
