

**Engineering Exhibit #2
WBOC-DT Channel 21**

RF Radiation Exposure Prevention Procedures

The applicant agrees to the following measures that will assure compliance with FCC OET Bulletin No. 65 entitled "Evaluating Compliance with FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields."

A restricted area will be established beginning at a point outside the area where the guidelines may be exceeded, either at ground level or at an elevation above ground level.

The General Public will be protected in that the center of radiation of the antenna will be at a height above ground that exceeds the minimum requirement specified in OET Bulletin 65.

For personnel whose duties require them to enter the restricted area, the following procedure has been instituted to ensure that exposure to RF radiation levels will not exceed the established guidelines.

The non-ionizing RF levels at any particular work location will be determined through measurement to determine their exact value. Emission of RF energy will cease or be reduced during the work period to the extent that such RF energy would not exceed the exposure guidelines for any time period. This policy will be posted at the access point to the restricted area.
