The proposed site is contained entirely inside the service contour third-adjacent station WCDX Mechanicsville, VA

.

WCDX

The proposed site is contained entirely inside the service of second-adjacent station WCDX, 221B1, 4.5kW, Mechanicsville, VA. The level of least arriving protected F(50,50) signal at the proposed transmitter site is 82.9-dBu. Using the U/D method for calculating proposed interference, the interfering contour is 122.9-dBu. The interfering signal would, in the worst case at the maximum radial, extend 18 meters from the center of radiation, which is now proposed at 89 meters AGL. This interference contour does not touch the ground. Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel station WCDX Mechanicsville, VA.
