# Calvary Chapel of the Finger Lakes, Inc. 

FM Translator W279BM, Facility ID 150833
Application for Minor Change
July 2008

## Exhibit 11A - Present and Proposed Translator Service Areas

This application proposes a change in antenna location of FM Translator W279BM, Batavia, New York from Cockram Road in the Town of Byron, NY (NAD 27 coordinates 43-04-01, 78-04-46) to Temperance Hill in the Town of Stafford, NY (NAD 27 coordinates 42-59-26, 78-07-17), a change in output from Channel 278 ( 103.5 MHz ) to third-adjacent Channel 275 ( 102.9 MHz ), and a reduction in effective radiated power (ERP) to 28 watts directional

The proposed facility will employ a vertically-polarized Scala model FMV directional transmit antenna with radiation center at 45 meters AGL and 332 meters AMSL with main lobe centered at an azimuth of 235 degrees True. The proposed ERP at each bearing complies with the maximum effective radiated power (MERP) limits of 47 CFR 74.1235(b)(1) for non-fill-in translators, as demonstrated in the following table:

| Azimuth <br> (Degrees) | Relative <br> Field | HAAT <br> (meters) | ERP <br> (Watts) | MERP <br> (Watts) |
| ---: | ---: | :---: | :---: | :---: |

| 355 | 0.63 |  | 11.1 | 13 |

To determine distances to the present and proposed $F(50,50) 1 \mathrm{mV} / \mathrm{m}$ service contours, the FCC Audio Division's online "HAAT Calculator" and "FM Propagation Curves" programs were used.

The respective service areas overlap by approximately 2.5 km , as shown in the following plot. This proposal thus qualifies as a minor change in facilities under 47 CFR 74.1233(a).
