Exhibit 12 Page 3
Calvary Chapel Church, Inc.
Interference Area to WNRW and WTLQ-FM
Fort Myers, Florida

The Proposed translator is within the 60 dBu contour of upper second adjacent station WNRW channel 253 and lower second adjacent station WTLQ-FM channel 249. The WNRW contour at the translator site is 78.3 dBu (F50,50) and the WTLQ-FM contour at the translator site is 75.1 dBu (F50,50). Using the ratio of 100:1 (translator to WNRW and WTLQ-FM) on the second adjacent channel, the population within the proposed translator 118.3 dBu and 115.1 dBu contour is zero. Using the free space equation, the predicted interference area is expected to extend 27 meters, for WNRW, and 39 meters, for WTLQ-FM, from the antenna. The antenna is 44 meters above ground level, thus the interference area will never reach the ground. Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."
