

**February 2011  
KCWR(FM) Channel 296A  
Bakersfield, California  
Allocation Study**

The instant application is being filed in order to correct the licensed transmitter site coordinates of FM station KCWR at Bakersfield, California. A recent operational review has revealed that the actual tower coordinates differ from the those specified on the station license by three seconds of latitude and four seconds of longitude, a discrepancy of approximately 140 meters on the ground.

The attached spacing study shows that the corrected site coordinates meet the co-channel and adjacent channel spacing requirements for Class A stations as prescribed in §73.207 of the Commission's Rules.

It is noted that the 70 dBu contour of the corrected KCWR facility does not encompass at least 80% of the area of the City of Bakersfield, nor does the 60 dBu contour encompass 100% of the city. However, KCWR has operated from this transmitter site continuously since the station was first licensed in 1990 (see the current license BLH-19900330KB, which covered the original construction permit BPH-19831202AG). Furthermore, the 70 dBu contour encompasses 99% of the population of the city (244,619 of the 247,057 person population per the 2000 Census), which satisfies the Commission's "substantial compliance" standard for coverage of the community of license. Since the only modification proposed by this application is a 140-meter correction in the transmitter site coordinates (with a corresponding recalculation of the antenna HAAT), KCWR is believe to comply with the community of license coverage requirements set forth in §73.315 of the Commission's Rules.
