

EXHIBIT 17
ENVIRONMENTAL COMPLIANCE
CLEVELAND, OHIO 229D
RADIO.COM, LLC
FCC FORM 349
DECEMBER 2015

The facility proposes to utilize a Nicom BKG77 2 bay, 0.75 wavelength-spaced, with an Effective Radiated Power of 0.019 kW at a 2-story building site. The proposed Center of Radiation will be 17 meters Above Ground Level.

Calculations were made using FM Model for Windows, version 2.10. FM Model. On the roof of the building, the model predicts a peak exposure of 9.652 W/cm² at a distance of 1 meter from the base of the tower. This represents less than 5% of the allowable Maximum Permissible Exposure (MPE) of 200 W/cm² for uncontrolled environments at any point on the ground. The applicant will ensure that the public access to the tower is restricted by fencing, anti-climb devices or other appropriate measures. If climbing of the tower by authorized personnel becomes necessary, transmitter power will be reduced to safe operating levels or transmission will be terminated, if necessary, as not to exceed the RF exposure limits to tower workers. The licensee will cooperate with other users at the site with the scheduling of such tower or antenna maintenance.
