

EXHIBIT 12
Page #1, Waiver Request of Section 74.1204
Grants Pass, OR 10 Watts ERP
Calvary Chapel of Twin Falls, Inc. 9/03

The proposed site is contained entirely inside the service contour of second-adjacent Station KSOR, Ashland, OR

KSOR

The proposed site is contained entirely inside the service contour of second-adjacent Station KSOR, Channel 211, Class C, 38 kW, Ashland, OR. As shown by the map on **page #2** of this waiver request, the level of the second-adjacent station KSOR least arriving protected F(50,50) signal at the proposed transmitter site is in excess of 100-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KSOR is in excess of 140-dBu (free-space contour method employed). This means that the 140-dBu interfering signal would, in the worst case at the maximum radial, extend 2 meters from the center of radiation, which is proposed at 18 meters AGL. This interference contour does not touch the ground. This tower is located in an unpopulated area on King Mountain where there are no tall buildings. The only buildings located at the site house equipment.

Because there are no buildings or residences that are located within or will be affected by this interference area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel station KSOR.
