Re: Brigadoon Boulevard Antenna Orientation

Dear Mr. Gunnerson

I hereby certify by this letter that the Brigadoon Boulevard tower antenna was oriented at 160 degrees from a 0° azimuth. This orientation is based upon information supplied by me Gunnerson Consulting and Communications Site Services, LLC and is within +/- 0.5 degrees of this determination.

The installation and alignment of the antenna was made on the ground using North oriented markings on the tower sections and making the required alignment to correspond with the base plate for a final azimuth. The section of the pole containing the aligned antenna was then placed on the bottom sections of the pole and aligned with the North markings. Final ground verification by compass observations was made.

Very Truly Yours,

A handwritten signature in black ink, appearing to read 'Brian Cays'.
