

Exhibit 1
Minor Amendment of Translator Application
Troy, MO
Channel 279D

Narrative

This application proposes a minor modification from the original short form application. Specifically, the transmitter site is changed and the height above mean sea level is increased. The minor modification creates no conflicts with any other Auction 83 tech box proposals, as shown in the Technical Exhibit. Figure 1 shows this amendment is a minor change.

Transmitter Site Test

There are eleven channels available at the transmitter site. The instant application does not preclude any LPFM facility at its proposed site. (see Figure 2)

Grid Preclusion Showing

Transmitter site is 39 kilometers or more from any In Grid location and therefore cannot preclude any LPFM licensing opportunity in the grid in this Appendix A Market.
