

Environmental Impact and RFR Compliance Statement

K209BQ is located at an existing communications site that is in full compliance with all requirements of Section 1.1307 of the Commission's rules.

This minor change application proposes a change from CH 209 to CH 211 and a correction in the site geographical coordinates, site elevation, tower height, and antenna height. K209BQ will operate with 0.250 kW ERP (vertical only, non-DA) at a COR AGL of 22 meters. For a worst case estimation, at 2 meters AGL at the base of the tower, the RFR is 10.4% of the general population/uncontrolled MPE limit.

There are no other broadcast facilities at the site.

The site has restricted access and RFR hazard warning signs are posted. The Applicant certifies that in cooperation with other users of the site all authorized personnel will be protected from RFR exposure in excess of FCC guidelines while accessing any controlled exposure area, including the tower, by either reducing power or ceasing operations, and information pertaining to the contact representative of the facility will be posted.
