

**Exhibit E-10**

The construction permit as issued by the Commission listed two special conditions or restrictions. This exhibit demonstrates compliance with these special conditions or restrictions.

The first special condition or restriction placed on the construction permit requires the applicant to coordinate with other users of the site during periods of maintenance. The applicant certifies that it will coordinate with other users and reduce power or cease operation as necessary to prevent workers from being exposed to levels of non-ionizing radiation in excess of those permitted under applicable safety standards.

The second condition requires the applicant to have a license application on file prior to the commencement of program tests. Program tests have not yet commenced, however, once this application is on file with the Commission, the applicant will commence operation of the facility.
