RADIO MULTIPLE OWNERSHIP ANALYSIS
PITTMAN BROADCASTING SERVICES, LLC

This radio multiple ownership analysis was prepared on behalf of Pittman Broadcasting Services, LLC (“Pittman”) in connection with Pittman’s proposed acquisition of the following radio stations in the vicinity of Lafayette, Louisiana:

Call Sign	City of License	Facilities
KVOL(AM)	Lafayette, LA	1330 kHz, 1 kW-N, 5 kW-D, U, DA-N
KDYS(AM)	Lafayette, LA	1520 kHz, 0.5 kW-N, 10 kW-D, U, DA-2
KRXE(FM)	Opelousas, LA	Channel 290A, 3.4 kW, 132 m
KFXZ(FM)	Maurice, LA	Channel 292A, 2.6 kW, 151 m

The principal community contours of all of these stations are depicted on a map included herein as Figure 1. The radio multiple ownership analysis considers only those stations with overlapping principal community contours (5 mV/m for AM stations, 3.16 mV/m for FM stations). An ownership study was prepared in accordance with the Federal Communications Commission multiple ownership rules as outlined in Section 73.3555. *

Radio Markets

The “radio market” applicable to common ownership of the subject stations is defined as the area encompassed by the mutually overlapping principal

* The instant analysis complies with the requirements of the both the current version of Section 73.3555 of the FCC Rules and that as adopted in the *Report and Order and Notice of Proposed Rulemaking*, MB Docket 02-277, FCC 03-127, Released July 2, 2003.

community contours of the stations proposed to be commonly owned. As listed in the table below, there are two defined “radio markets” formed by the subject stations:

Defined Radio Market	Stations that Define Radio Market	
	AM Stations	FM Stations
Market 1	KVOL, KDYS	KRXE
Market 2	KVOL, KDYS	KFXZ

Count of Stations in Defined Markets

The number of radio stations in a “radio market” is determined by counting the operating commercial stations that have principal community contours that intersect the principal community contours that define the radio market. Only those stations located within 92 km of the perimeter of the mutual overlap area of the respective defined market areas were employed in the count of stations. Commonly owned stations were not considered in the count of stations in the defined markets. The results of the analysis are tabulated below:

Defined Radio Market	Number of Stations in Radio Market
Markets 1 & 2	8 AM; 20 FM; 28 Total

Figure 2 is a tabulation of the radio stations identified in the defined radio markets. Only known licensed, operating commercial stations were employed for the study. Distances to the AM coverage contours were predicted using the antenna patterns as identified in the Commission’s AM database and the appropriate Ground Wave Field Strength versus Distance Graph described in Section 73.184 of the FCC Rules. Ground conductivity data

were obtained from FCC Figure M3. Distances to the FM contours were determined based on the method outlined in Section 73.313 of the FCC Rules. Terrain data were derived from the U.S.G.S. 3-second computer database for each of the FM stations using radials evenly-spaced every 2 degrees of azimuth.

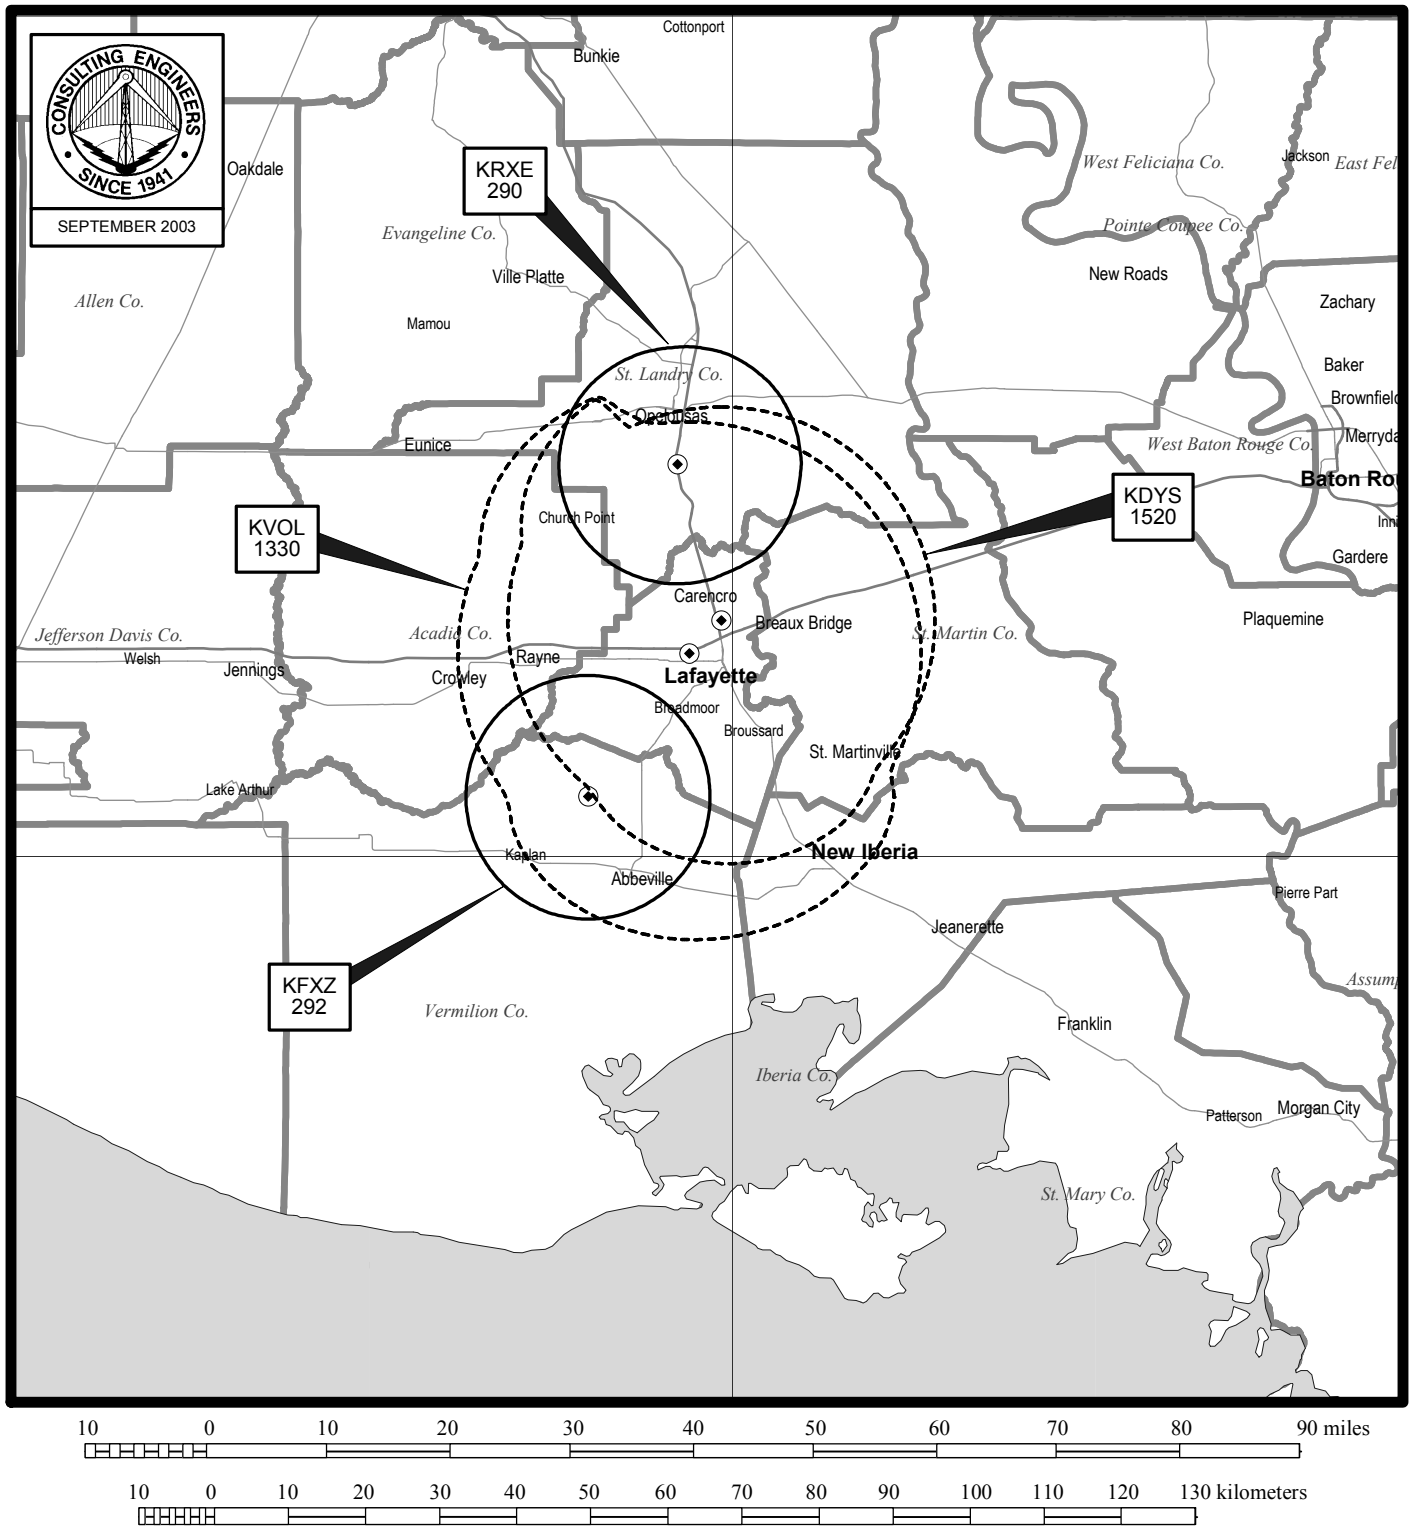

Based on the above, it is concluded that the proposed combination of the stations to be owned complies of the both the current version of Section 73.3555 of the FCC Rules and that as adopted in the *Report and Order and Notice of Proposed Rulemaking*, MB Docket 02-277, FCC 03-127, Released July 2, 2003.
