NONIONIZING RADIATION COMPLIANCE

Cornerstone Church, Inc.
Rossford, OH

The proposed WDMN daytime facilities will fully comply with the current FCC Standard with regard to human exposure to nonionizing radiation. An examination of the fencing distance tables contained in Supplement A to FCC OET Bulletin No 65 reveals that erection of appropriately marked fences at a distance of one meter from the base of each of the proposed WDMN towers will be sufficient to restrict general public access to all areas where the power density levels will be in excess of the permitted level for uncontrolled exposure during operation in both daytime and nighttime modes of operation from this site. During the process of constructing this antenna system, appropriately marked fences will be installed to restrict general public access to all areas within at least one meter of each of these five towers.

WDMN will also continue to take appropriate steps to insure that workers that must be inside the fenced areas at this site will not be exposed to levels of nonionizing radiation that are in excess of the levels permitted for controlled exposure. These steps will include a reduction in power, the cessation of operation, or operation in a mode that does not employ the particular tower when work becomes necessary inside these fences or on any of these towers.
