

Changes Contained in This Amendment

Changes to the application are as follows:

1. Section III-A, Item 1: Channel has been updated.
2. Section III-A, Item 9: ERP has been updated.
3. Section III-A, Item 10: Transmit antenna has been updated.

Preclusion to LPFM Points

This application has been studied to determine preclusion to LPFM points. Due to the location of the proposed amended transmitter site being outside of the 39km buffer zone around any relevant grid and being outside of the defined market area, this application does not require a Grid Test because the amended application cannot preclude any LPFM licensing opportunities in any grid.

Therefore, the proposed facility does not preclude a single remaining LPFM opportunity at the specified transmitter site location.
