

EXHIBIT E-2  
ENVIRONMENTAL COMPLIANCE  
K270BN ESTES PARK, COLORADO, CH.271D  
MOUNTAIN COMMUNITY TRANSLATORS, LLC  
FCC FORM 349  
OCTOBER 2009

The proposed operation of K269FR will radiate only 41 Watts Effective Radiated Power. Because the total ERP from the combined operation is less than 100 Watts, it is categorically exempt from RF environmental processing.

The tower site is existing, and is registered, FCC # 1210621, therefore there are no other processing environmental concerns.

The licensee, Mountain Community Translators, LLC certifies that it will cooperate with tower personnel and other users of the tower to either reduce power to safe operating levels or cease transmissions while maintenance is performed on the tower.

The applicant assumes full responsibility for remedying the complaints of blanketing interference for a period of one year. With the low proposed ERP of 41 Watts and the fact that the immediate area around transmitter site is not populated, no blanketing interference issues are anticipated.
