PRECLUSION SHOWING
BNPFT-20030311ATQ, BARSTOW, CALIFORNIA

This exhibit supports a Form 349 longform application to supplement a shortform application filed in the Auction 83 filing window of March 2003.

This application proposes a change in location of the transmitter. This move places the transmitter site in the 39 KM buffer zone surrounding the Victor Valley, California, Arbitron market (#123) preclusion study grid. Victor Valley is identified in Appendix B of the 4th R&O in FCC 12-29 as a spectrum available market.

The proposed location is not within 39 KM of the study grid of any other Appendix A market nor is it within any out-of-grid Top 50 Spectrum Limited market.

Per DA 13-283, applicants proposing a change in location which brings the application within the defined grid of one of the Appendix A markets or the 39 KM buffer zone therearound must file an exhibit demonstrating that grant of the application would not preclude the future grant of an LPFM construction permit within the defined grid. Appendix B of the R&O indicates that applicants should use a 20' x 20' preclusion grid when evaluating proposal in or near the Victor Valley market.

Below is the output of the Commission's LPFM6 program identifying grid locations for every channel where an LPFM station operating at 100 watts at 30 meters HAAT might operate. The channel proposed and those first and second channels adjacent to it are

highlighted. Considering the proposed channel and the first- and second-adjacent channels, the program identifies one channel on which an LPFM station might be applied for. This is channel 259, which is first-channel adjacent to the proposal.

The proposed facility will operate at 27 watts ERP with a standard twelve radial HAAT of -194 meters. Per 47CFR73.807(d)(1), the minimum permissible first-channel adjacent separation between a translator of this power and HAAT and an LP100 station is 15 KM.

=====

Attached is a map exhibit showing the location of the proposed transmitter site and 15°KM separation circle in relation to the Victor Valley 20' x 20' grid. It shows that the first-channel adjacent separation circle falls short of the boundary of the preclusion grid. This demonstrates conclusively that grant of the proposed application will not preclude the future grant of an LPFM license anywhere within the study grid.

I, Gray Frierson Haertig, herby affirm that;

I have been retained by Radio Bilngüe, Inc. to prepare this report;

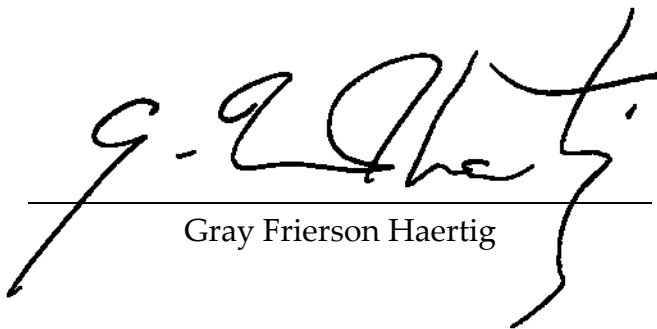

I am Principal and Senior Engineer of Gray Frierson Haertig & Assoc., a firm specializing in broadcast technical consulting;

All statements made herein and not attributed to others are true to the best of my knowledge and represent the actual facts of the matter;

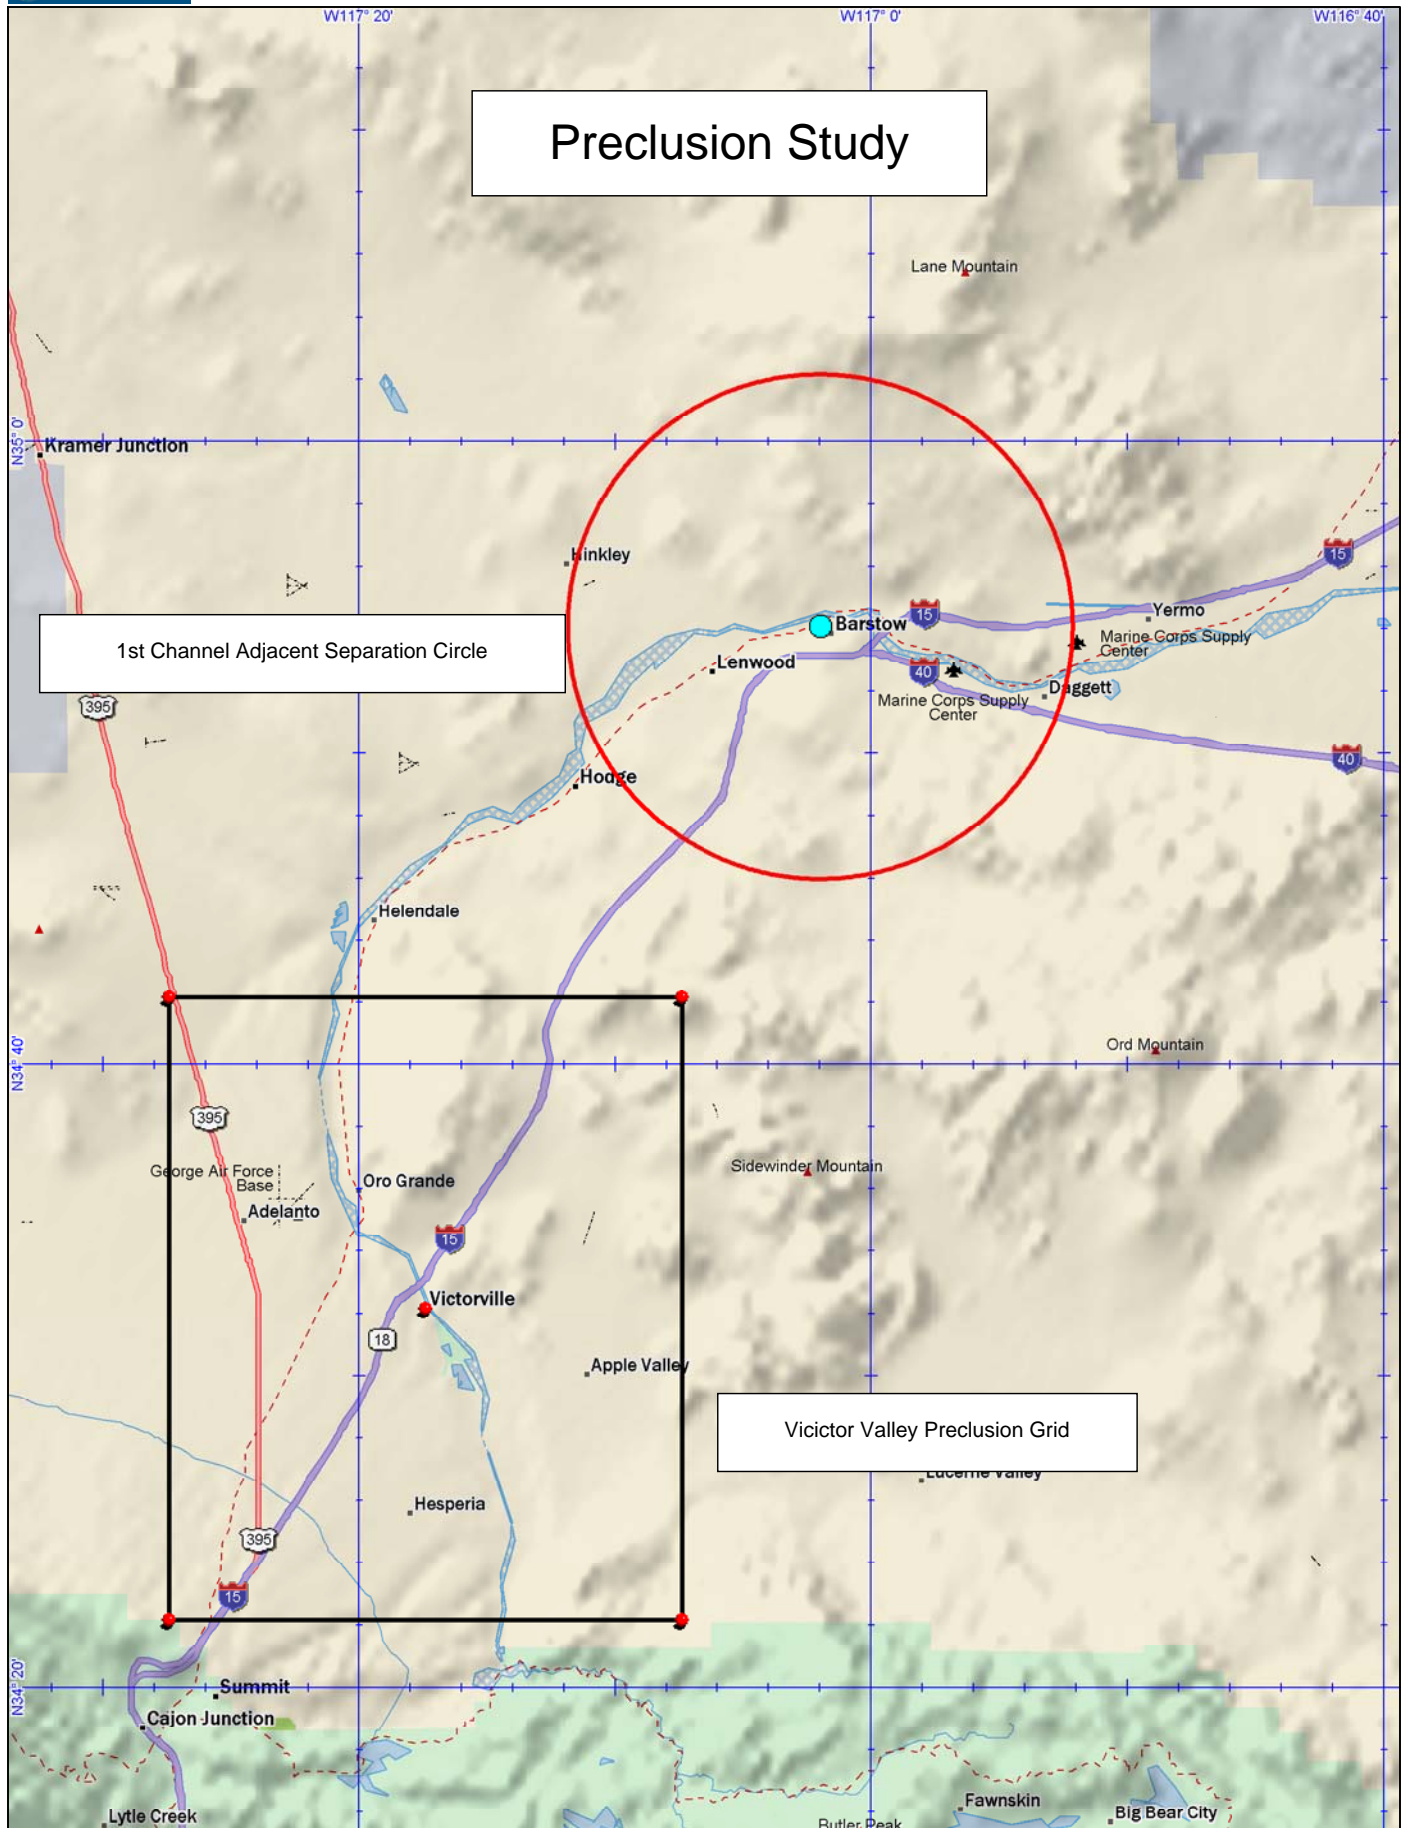

I am a broadcast engineer of 47 years experience;

And that my credentials are a matter of record with the commission.

Respectfully submitted this 27th day of March 2013,

Gray Frierson Haertig
