

EXHIBIT E-2
ENVIRONMENTAL COMPLIANCE
K238BG MASONVILLE, COLORADO 235D
MITCHELL A. BERANEK
FCC FORM 349
JUNE 2009

The proposed operation of K238BG on 235D will radiate 65 Watts Effective Radiated Power. Because the total ERP from the combined operation is less than 100 Watts, it is categorically exempt from environmental processing. The transmitter would be located on an existing structure and there would be no additional environmental impact on the surrounding area. In addition, the proposed facility would not constitute a RF exposure hazard to persons at the site with respect to the RF radiation exposure guidelines contained in ANSI Standard OET Bulletin 65, edition 97-01, along with Supplement A (Edition 97-01) regarding additional information for Radio and Television Broadcast Stations.

The licensee, Mitchell A. Beranek, certifies that he will cooperate with tower personnel and other users of the tower to either reduce power to safe operating levels or cease transmissions while maintenance is performed on the tower.

The applicant assumes full responsibility for remedying the complaints of blanketing interference for a period of one year. With the low proposed ERP of 65 Watts and the fact that the transmitter site is not populated, no blanketing interference issues are anticipated.
